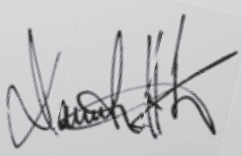
Welcome at Huber

Future-proof and sustainable temperature control technology – inspired by temperature

Dear readers,

In our updated catalogue we are pleased to present you a product range that is completely focussed on sustainable and 100 % future-proof temperature control technology. Consistently all temperature control units with refrigeration machine in our portfolio are equipped with natural, environmentally friendly refrigerants as standard. Therefore, they offer future-proof investment and already fulfil the strictest requirements of the EU F-Gas Regulation (EU) 2024/573.

In times of increasing ecological responsibility, we are focussing on technology that is aligned with the standards of tomorrow. Our temperature control solutions with natural refrigerants are designed to offer you long-term investment security – regardless of environmental regulations and legal restrictions which may apply in the coming years.
Our further improved product range provide the optimum conditions for safe and environmentally friendly temperature control of your applications.



Daniel Huber, CEO

Unistat – the original:
high precision temperature control
since 1989

Our mission

High precision temperature control technology to make your work easier: that is our mission.

Our temperature control technology makes work in research and industry easier and more efficient. This is our mission and our products and services follow this concept.

Our products have proved themselves through experience and are recognised as technology leaders in the field of Temperature Control in experimental, research facilities and industrial production processes. A typical application is process temperature control in the chemical and pharmaceutical industry.

In other industries, our temperature control units are used to carry out material and stress tests, temperature-dependent testing of food and beverage, cosmetic products and building materials and the simulation of environmental conditions and ageing processes.

Please do not hesitate to contact us if you need an individual temperature control solution. We would be happy to advise you personally and show you suitable solutions or completed reference projects.

Our services

We develop, build and supply temperature control solutions from -125 to +425 °C for applications in all industries. Our products are used in countless market sectors and diverse applications where temperature control is a key part of the process.

Advance with innovation

Our awards from Top 100 as "Innovator of the Year" and as "Craft enterprise of the Year" emphasise that we are one of the most innovative medium-sized companies in Germany.

Customer specific solutions

Our expertise and abilities facilitate the design and build of special and customised units to address challenging applications. We have successfully implemented custom projects in numerous industrial sectors. Our customers appreciate our flexibility and strength in innovation.

Committed to the environment

With our "Environment plus" project, we have comitted ourselves to an intensive effort to develop even more environmentally-friendly, energy-efficient and resource-saving refrigeration technology.

- IQ/OQ documentation
- User training
- Technical on-site service
- Rental equipment
- Maintenance contracts
- Certifications / Calibration

Unistats are quickly and easily filled and put into operation – thanks to their automatic functions for venting and degassing

Results can be documented via USB or LAN

Remote control made easy with the detachable controller

Our discipline: Temperature control

Unistats are predestined for demanding temperature control applications in all industries

Unistats embody responsive performance and fast dynamics for demanding applications. Our engineers recognise that process reliability is a primary concern in research and production.

When you need the certainty that your temperature-dependent laboratory and production processes will run as intended and without compromise at any time, Unistats give you that reassuring feeling of being on the safe side.

Unistats are circulators without a bath. This principle reduces the masses to be temperature-controlled enabling dramatically faster temperature changes. Unistats have a very small mass themselves which contributes to the extremely dynamic cooling and heating speeds of several hundred Kelvin per hour. For externally closed systems, an expansion vessel allows for temperature related changes in volume of the circulating fluid. For externally open applications, the expansion vessel can be easily closed off. This allows the Unistat to be placed above or below the application without "flow-back".

The Unistat system combines the possibilities of effective thermodynamics and intelligent microelectronics, making it a highly efficient alternative to open bath temperature control technology. In addition, modern pump technology and optimised circulation keep flow rates to a maximum leading to significantly improved heat transfer at the object under control.

Because it has proven itself to be such a powerful concept, the Unistat principle has not changed significantly since 1989 .

Predictable and reproducible results and unrivalled rates of change in the course of temperature control result in a significantly improved performance leading to a rapid return on investment, further reinforced by minimised operating costs made possible by the Unistat principle.

Unistats improve performance and dynamics: compact dimensions, great performance!

Sustainable and future-proof temperature control solutions

Our entire product range is designed to be consistently sustainable and thus allows a 100 % future-proof investment.

All temperature control units are equipped with natural refrigerants as standard. Our products are oriented towards the standards of tomorrow and already meet the strictest requirements of the EU F-Gas Regulation (EU) 2024/573 today.

Key points of the (EU) 2024/573 Regulation
On 11 March 2024, the European Union published the new Regulation (EU) 2024/573 on fluorinated greenhouse gases.

The aim of the new regulation is to reduce the use of fluorinated greenhouse gases (F-gases) in order to further reduce greenhouse gas emissions and thus contribute to the fight against climate change.

Phase-down: The total amount of fluorinated greenhouse gases that can be placed on the EU market will be gradually reduced. The aim is to achieve a complete phase-out by 2050.

As a leading supplier of high-precision temperature control systems, we have already responded proactively to these regulatory changes. We are already prepared for the earliest phase-out on 1 January 2025. As of today, the company is the only supplier in the field of liquid temperature control to offer 100% future-proof, climate-friendly and sustainable temperature control solutions in all performance classes. Most Huber circulators and coolers have been equipped with natural refrigerants as standard for years, which, with GWP values of less than 10, are far below the specified limit of 150. As a result, Huber appliances are not only compliant with current and future legal requirements, but are also a sustainable choice for customers.

We launched the first products with natural refrigerants back in 1976. Accordingly, many Huber products have been equipped with natural refrigerants as standard for decades. These appliances include the popular Ministat, Minichiller, KISS/CC, Petite Fleur, Tango and many other model series.

Transitional period until 2027 – synthetic refrigerant appliances still available
The new EU regulation provides for a transitional period until 1 January 2027, during which appliances with synthetic refrigerants can still be sold. Of course, we want to offer the greatest possible flexibility, which is why these models are still available.
These can be found in an overview table from page 168 in this catalogue.

However, it is advisable to switch to climate-friendly alternatives today. This will not only provide you with a sustainable solution, but also with long-term benefits, for example in future maintenance and repairs, where you can benefit from the good availability of natural refrigerants.

Focus on Natural refrigerants

With the latest adjustment of the product range, models with natural refrigerants will be even more in the spotlight. From now on, these models will be the standard on our website and in the sales documentation, i.e. appliances with synthetic refrigerants will only be included on a transitional basis.

Advantages:

- 100% future-proof investment
- Planning security with regard to legal requirements
- Environmentally friendly with minimal GWP
- Reduced energy consumption
- Green Line

Many models are now also available as "Green Line" versions with CO_2 refrigerant (R-744). The refrigeration circuit of these appliances has no ozone depletion potential (ODP = 0), a negligible global warming potential (GWP = 1) and the refrigerant is non-flammable.

With our sustainable temperature control solutions prepare you for future challenges and ensure your systems meet the highest environmental and efficiency standards. Learn more about our green solutions at www.huber-online.com.

Energy-saving wonder: The Tango factory

In addition to refrigeration technology, we also organise our company processes from goods purchasing to production in an environmentally friendly and resource-saving manner. Numerous energy-saving measures have also been implemented in our company building.

Sustainability is more than just a promise for us. Our company building shows how efficient energy saving can be. The Tango factory is an energy-saving marvel, with special heat insulation measures and concrete core activation we have significantly reduced CO_2 emissions.
Consisting of a solid concrete structure, triple glazed windows, a thick insulation layer and around 40 km of plastic pipes in floors, ceilings and walls it is a gigantic heat exchanger with minimal energy requirements. In production we recover the heat created during product testing, a photovoltaic system generates electricity ecologically, a ground water cooling system saves water and the entire premises are illuminated with power-saving LED technology.

In 2013 we successfully participated in the "ECOfit" programme in the state of Baden-Württemberg and implemented/initiated different environmental measures.
In 2016 we introduced an energy management system based on EN16247 that identified energy saving potentials even better and so were able to derive appropriate measures and further improvements. We were also awarded the environmental award for companies from the state of Baden-Württemberg.
In 2023 we were awarded as the first company in the whole of Baden-Württemberg with the KEFF+ label by the Ministry of the Environment.

Mission “Environment plus“

1976
First chillers with natural refrigerant.

1982
First intelligent cooling circulator with cooling power adjustment and water cooled refrigeration with water- and energy-saving energy management.

1993
First to convert to non CFC refrigerants.
7 years before the legal phase out.

2006
Cooling circulators with the option “natural refrigerant“ in accordance with the regulations of the global green house policy of F. Hoffmann-La Roche AG.

2009
Environmental friendly cooling with CO_2 refrigeration machines in accordance with the guidelines regarding the global green house policy of F. Hoffman-La Roche AG.

2010
Process heat coupling: Unistats are combined with already available primary energy sources such as steam, cooling brine or liquid Nitrogen.

2014
Certification according to the ECOfit programme of Baden-Württemberg for industrial environmental protection.

2016
Introduction of the energy management system based on EN 16247 to recognize the saving possibilities. We were honoured with the Environmental Award of Baden-Württemberg.

2018
Introduction of climate-friendly chillers with CO_2 as natural refrigerant.

2020
Development of a thermoelectric laboratory cooler with state-of-the-art Peltier technology as a refrigerant-free cooling solution.

2021
Introduction of the new Unimotive model series especially for applications in the automotive industry.

2023
Market launch of high-performance temperature control systems with CO_2 for the automotive industry under the “Unimotive – Green Line“ brand.

2024
Conversion of all temperature control units with chillers to natural, environmentally friendly refrigerants.

With our mission “Environment plus“ we are an ecological pioneer in industry.

History & milestones

With innovations to the future

The 50-year anniversary of Peter Huber Kältemaschinenbau was celebrated in 2018. The anniversary year was devoted entirely to the founder and visionary Peter Huber. His innovation in refrigeration technology and the continuous development of the products have always shaped the company's future!

1968

Peter Huber Kältemaschinenbau was founded in 1968 by **Mr. Peter Huber** (†2018). As a "remote student" he taught himself refrigeration technology and did it so thoroughly well that he became the second Master in refrigeration plant construction in southern Germany. In the industry he was quickly called the **"Kältepapst"** (Pope of Refrigeration).

1976

Market introduction of the **Ministat®**, the smallest cooling circulator in the world and the **Variostat®**.

1980

Introduction of **Plug & Play** technology. The first replaceable controllers for all laboratory thermostats.

1984

Foundation of the Peter Huber Kältemaschinenbau GmbH. The five children of Peter Huber become shareholders.

1986

Presentation of the **Dr.-Rudolf-Eberle Innovation Award** of the state of Baden Württemberg for the development of the **Rotostat®** a workplace for rotary evaporators.

1989

Starting signal for the **Unistat Tango®**. The Unistat technology unites thermodynamics and microelectronics and thus revolutionised the entire industry.

1994

Foundation of the Tango Club. In Switzerland, the legendary **Tango Club** for active exchange of views is founded by 40 users of this revolutionary technology.

1998

Construction of the **Tango factory** at the new location in the industrial area Offenburg-Elgersweier.

2005

Tango® Nuevo
The advancement of the successful Unistat Tango sets new standards with TA" (True Adaptive Control) to continually and automatically tune the PID control parameters.

2009

Petite Fleur®
The "small Tango" extends the Unistat range downwards and now enables a professional scale-up.

2009

Foundation of **Huber INDIA** in Bangalore.

2010

Huber SWISS is founded at Möhlin in Switzerland.

2012

New controller generation **Pilot ONE®** with trendsetting technology and state-of-the-art operating function.

2014

The international orientation of the company is strengthened with the founding of **Huber USA**.

2016

Conversion into a stock company.

2017

Van Der Heijden Labortechnik GmbH

Acquisition of the company Van der Heijden Labortechnik and foundation of **Huber UK & Ireland**.

2018

Foundation of **Huber CHINA** in Guangzhou.

2020

Foundation of **Huber FRANCE** in Illkirch-Graffenstaden.

2020

Refrigerated Heating Circulator **Piccolo®** with the state of the art Peltier technology.

2021

Introduction of the new **Unimotive®** model series especially for applications in the automotive industry.

2024

Conversion of all temperature control units with chillers to natural, environmentally friendly refrigerants.

2024

Takeover of the long-standing Italian sales and service company **Huber ITALIA** based in Legnano.

> We do not need to be the biggest, we want to be the best.
>
> Daniel Huber

Innovations and awards

We would like to measure ourselves against the best and continuously improve our performance – corporate competitions help us achieve this.

"Innovator of the Year", a grand award of medium-sized enterprises, "Trade Business of the Year", "Top Employer", the "Environmental Award of the state of Baden-Württemberg" and an inclusion in the "Lexicon of German World Market Leaders": these are the most recent successes we have won in various competitions.

Every competition has its own focus: Innovation at Top 100 and economic development, creation of jobs and social commitment for the Grand award for medium-sized enterprises. At the "Top Job" it is about the quality and attractiveness as employer and for the "Lexicon of German World Market Leaders" a technological pioneer role is required.

Therefore, our successes make one thing clear: We have a proven track record in all business areas with above-average performance – and we are proud of it!

Petite Fleur, Grande Fleur and Tango for the research laboratory

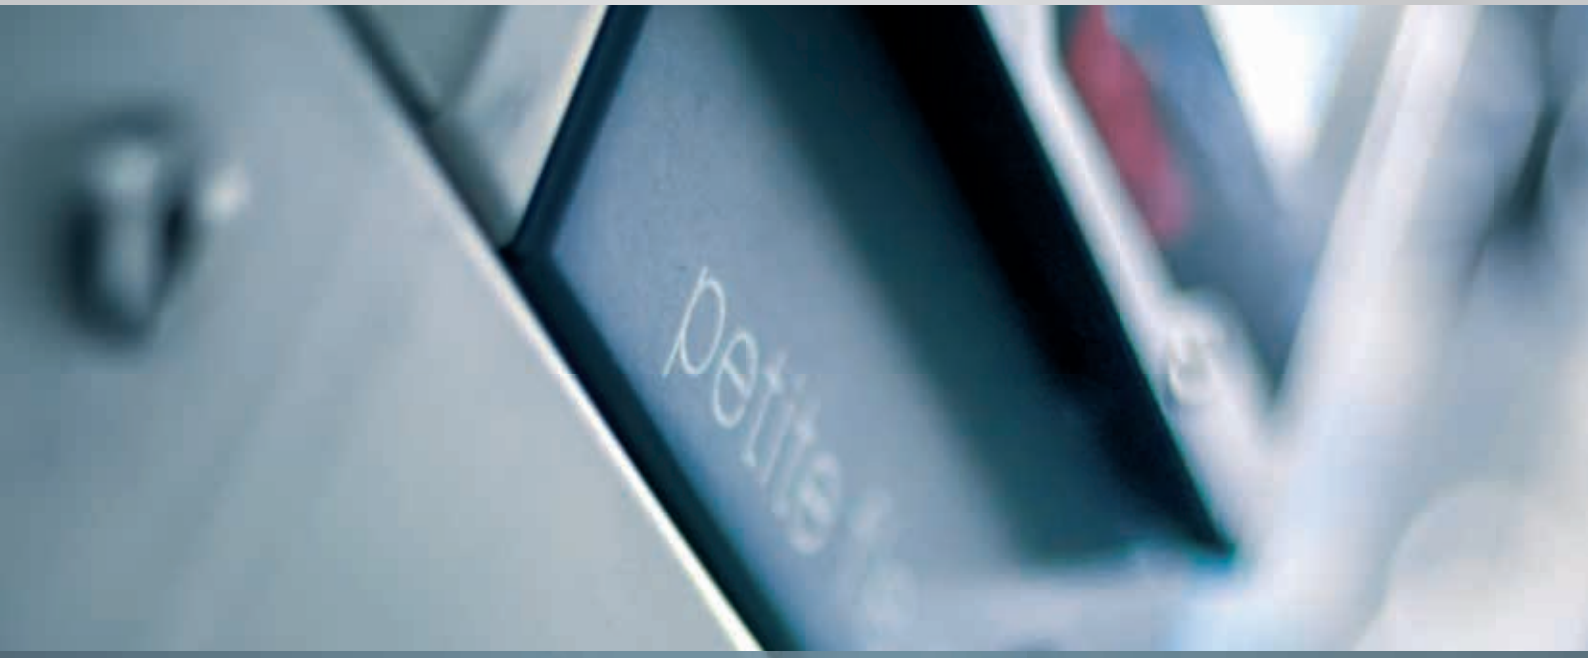
Unistats for process technology

Unistats for industry

Dynamic temperature control

-125 °C ... +425 °C

Unistats are predestined for demanding temperature control applications in all industries



Unistats embody responsive performance and fast dynamics for demanding applications

Unistat® – The Original

Unistats cannot be compared with conventional temperature control technology. Thermodynamically, there is no better solution.

The introduction of the Unistat technology in 1989 has initiated a revolution in fluid temperature control. Unistats are the ideal solution when it comes to fast and highly precise temperature control of externally connected applications. Compared to traditional circulation thermostats, Unistats impress with extremely fast temperature changes over and broad temperature ranges without liquid change.

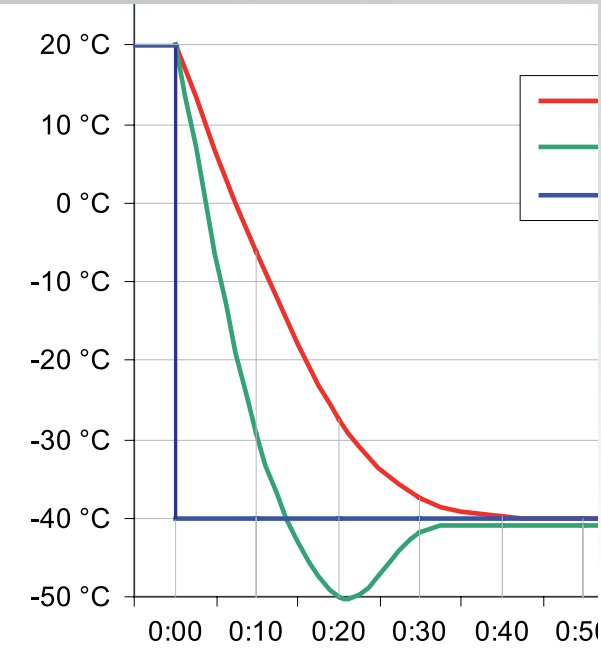
Unistats were developed for demanding applications in the Chemical and Pharmaceutical industries such as the temperature control of reactors, autoclaves, miniplant/pilot systems, reactor blocks and calorimeters. They are now equally at home providing temperature control solutions across the industrial spectrum. There is a choice of different model series with cooling capacities from 0,48 to 130 kW. Unistats provide consistently stable process conditions at any time.

Dynamic temperature control systems

- Responsive thermodynamics for fast control behaviour for chemical processes
- Extremely fast heating and cooling rate due to small internal volumes
- Broad working temperature ranges without liquid change and long life
- Process stability and reproducible results at any time for solid research work
- Intelligent TAC function continually monitors performance and automatically tunes the PID parameters for optimum control
- Wide range of models with covering different temperature ranges and cooling capacities of up to 130 kW for laboratory and production

Unistats®

Functions and features in detail



True Adaptive Control

Compared to most automatic PID controllers, True Adaptive Control (TAC) even goes one step further. TAC analyses the control loop over the entire temperature range and creates a multidimensional model of the temperature control system.

The temperature controller's PID parameters are continually updated to give the best control parameters. This enables the controller to always achieve the shortest "time to temperature" with minimal over/undershoot. If required, the PID controller parameters can also be adjusted manually.

Pressure Control VPC

Unistats are equipped with Variable Pressure Control (VPC). The desired pump pressure can be set and controlled via VPC. VPC reliably protects glass reactors against damage caused by excessive pressure. The risk of rupture of expensive glass apparatus is avoided. Changes in viscosity of the heat transfer fluid (HTF) during heating and cooling are automatically compensated for by VPC.

Some Unistats have a speed-controlled pump with soft start that regulate the pressure via an integrated pressure sensor. Unistats with a constant speed pump motor can control the pressure with an optional "VPC-Bypass".

Programming

The integrated programmer with linear ramp function allows the implementation of individual temperature set-points or more complex temperature requirements with up to 100 programme steps. Either temperature-stable or time-stable, optional with additional actions such as the control of a floating contact, analogue output, temperature control mode etc.

Maximum flow

The minimisation of internal pressure losses along with the large pump connections improve the flow. This results in higher flow rates and a significant optimisation of the heat transmission for increased dependability and an even faster reaction time to control the process. M16x1 adapter are included for table models.

Interfaces

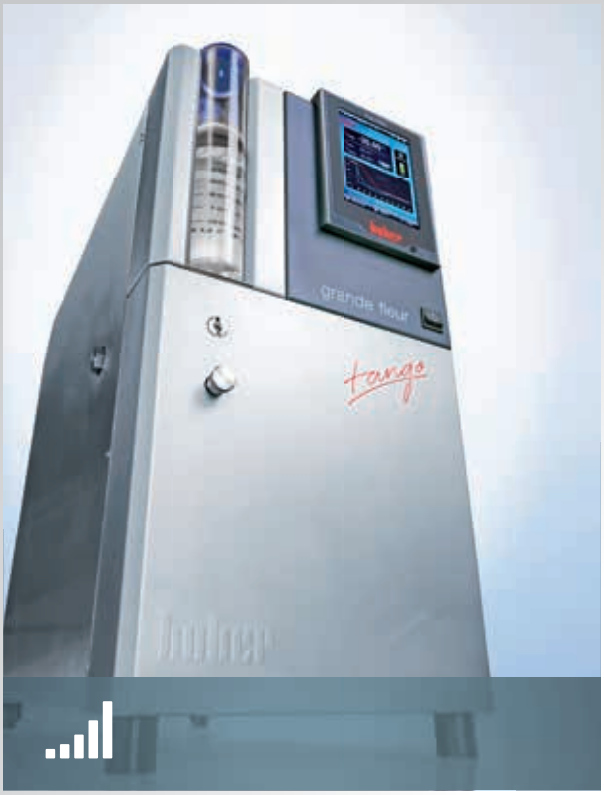
As standard, Unistats have RS232, USB Host, USB Device and LAN connections. Measurement data can be saved directly on a USB stick. A PC or notebook can be connected via USB, RS232 or LAN interfaces.

E-grade® Explore

The optional E-grade "Explore" turns your Unistat into a development tool for process and chemical engineering. With the E-grade, viewing and/or recording further information on temperature, heating/cooling capacity and pump capacity in the system is possible. Typical applications are process development and scale-up trials.

Unistats®

Functions and features in detail



Performance and dynamics

Unistats combine effective thermodynamics and intelligent microelectronics. The introduction of the Unistat technology in 1989 represented the birth of a complex alternative to the known temperature control technology. Unistats are circulators without a bath. For externally closed systems, an expansion vessel allows for and contains thermally induced changes in volume of the circulating fluid. The expansion vessel can be simply isolated when the temperature control of an application where the application is an open bath allowing the Unistat to be placed above or below the application without "flow-back".

This principle reduces the masses to be temperature-controlled enabling dramatically faster temperature changes. Unistats have a very small mass themselves which contributes to the extremely dynamic cooling and heating speeds of several hundred Kelvin per hour. For a comparison of dynamics, let's look at the cooling performance density [watt/litre] according to DIN 12876.

High safety

Unistats have many features for handling temperature control applications remotely and safely during continuous operation. Over-temperature, setpoint and alarm limits can be adjusted according to the conditions of the application. The temperature and pressure sensors can be calibrated and the microprocessor controller monitors the operating status. VPC (Variable Pressure Control) monitors the maximum pressure in the fluid loop. Passive components ensure a extraordinarily high level of reliability.

Scale-up for professionals

Unistats can thermally control small quantities just as well as production quantities. Models with cooling capacities of 0,48 to 130 kW permit flexible scale-up in research, kilo-laboratory, mini-plant, pilot plant and in production. Unistats rise to the challenge of scale-up because their performance is uniformly good from smallest to largest units and the user interface is common to all units.

Explosion protection (ATEX)

If Unistats are to be operated in connection with explosion-proof systems, there are two alternatives: Using the ATEX-compliant remote control, the Unistat is set up outside the explosion zone. Alternatively, the Unistat can be installed inside a pressurised, enclosed Ex px cabinet (available from us as part of a complete solution) and set-up within the explosion zone.

Low operating costs

The focus is always on the temperature control task when working with Unistats. Excellent heat transfer, reproducible results and very high temperature change speeds result in an significantly improved return on investment. The longevity of the heat transfer fluid and the low consumption values for cooling water and energy also ensure low operating costs.

Save space

The space requirements of Unistats are really low. The volume cooling capacity [W/dm³] according to DIN 12876 permits a comparison and describes the relationship of the cooling capacity to the housing volume.

Unistats®

Functions and features in detail

Process optimisation made easy

The E-grade "Explore" turns a Unistat into a development tool for process and chemical engineering. This E-grade is an advanced development of the previous Unistat abilities and uses the equipment features of the Unistats to represent important process and performance data on the device display/ output via interfaces.
E-grade "Explore" provides temperature, HTF pressure and (with an optional Flow Sensor) HTF flow rates. When a Flow Sensor is used, Flow Rates can also be controlled. This measurement and control of various parameters and the display of process data makes this E-grade ideally suited for the development and optimisation of processes, the determination of heat balances and abort criteria, use tests of raw materials and for the advance data collection for scale-up trials.

Measure and control flow

Measurement and control of the flow rate is easily possible with Unistats. For this we offer different measuring devices for installation in the fluid circuit. The heat transfer fluid (HTF) flow rate can be displayed directly on the temperature control unit and can be requested and/or displayed through the digital interfaces. (USB, RS232, LAN and, optionally, RS485, Profibus) It is also possible to regulate flow rate using flow sensor.

A Unichiller or Unistat equipped with an integrated VPC bypass or external VPC bypass as an accessory is required.
The flow measurement devices can be used to complete basic tasks, such as determining kinetic/dynamic features of reaction syntheses and crystallisation, inspections of heat quantities and scale-up testing.

OPC-UA compatible

The -UA (OPC Unified Architecture) communication protocol describes data semantically and thus enables data exchange between automation systems without having to programme a driver for this purpose. Using the E-grade OPC-UA, Huber temperature control unit can communicate with Pilot ONE via the modern OPC-UA protocol.

More pump pressure

For most applications the circulation is paramount for good heat transfer. Some applications, however, have narrow cross-sections due to their design and high pressure drops and therefore require more pump pressure. Higher pressure pumps are available on request e.g. flow-through chemistry and semicon applications.

Quickly coupled

For frequent changes of applications at the temperature control unit we recommend our quick couplings. The quick couplings meet the special requirements in temperature control technology and reliably prevent the leaking of temperature liquid. The quick couplings ensure only minor pressure losses and thus ensure good performance of the overall system.

Record data

Process data can be saved directly on a USB stick. The storage is carried out at a time interval of 5 seconds as universally usable CSV file, which can easily be evaluated with e.g. Microsoft Excel® and processed further. Also new is the storage and loading of temperature control programmes to a USB stick.

Unistats®

Controller features at a glance

As standard, Unistats® are equipped with the intuitive icon-driven Pilot ONE® controller with E-grade® "Professional".

Plug & Play technology
The modular controller concept permits easy service and the use of the controller as remote control.

Everything at a glance
All relevant temperatures can be viewed numerically and/or graphically on the Pilot ONE's screen.

Interfaces
As standard, the Pilot ONE is equipped with RS232, USB Device, USB Host, Ethernet and a Pt100 external sensor connection.

Integrated programme function
An integrated programmer capable of storing 10 different and individually named programs and also includes the ability to program linear and exponential ramps. Programs can be uploaded or downloaded from a USB drive.

5,7" touch screen
The operation of the Pilot ONE is easy and intuitive in 13 languages using the large colour touch display.

Record process data
If a USB drive is connected, process and service data can be recorded directly onto it in real time.

Unistats®

Serie 400

The Unistats of the series 400 are ideal for applications in process and chemical engineering, such as temperature control of reactors, autoclaves, miniplant/pilot systems, reactor blocks and calorimeters.

Unistats "P" are equipped with high pressure pumps and are suited for applications with high pressure drops.

Unistats®

Serie 500 with CO_2

GREEN LINE

Unistats of model 500 series with cooling capacities up to 35 kW are ideally suited for temperature control applications in process and chemical engineering as well as for demanding material testing and temperature simulations in different industry sectors.

The GL (Green Line) model variants work with the refrigerant carbon dioxide CO_2.

Unistats "P" are equipped with high pressure pumps and are suited for applications with high pressure drops.

Unistats®

Serie 800

Natural Refrigerant

Unistats of the 800 series are characterised by low-end working temperatures down to -85 °C with compact dimensions. These devices are suited mainly for temperature applications with moderate cooling capacity requirements.

Unistats "P" are equipped with high pressure pumps and are suited for applications with high pressure drops.

Unistats® high temperature

Natural Refrigerant

Serie TR400

Unistats of the TR400 series impress with a compact and space-saving round design. Thanks to the minimised internal volume short heat-up times can be realised. A direct contact of the hot heat transfer fluid with the atmosphere is avoided protecting the heat transfer fluid. These devices are ideally suited for high-temperature applications such as double-walled reaction vessels, pilot plants and for high-temperature distillation.

HT models are equipped with controlled cooling with stepper motor controled water cooling.

Unimotive®

▸ Unimotive® GL

The Unimotive model series is specially designed for applications in the automotive industry. The temperature control systems are designed for operation with water-ethylene glycol mixtures with corrosion protection (e.g. Glysantin®) down to -45 °C. Typical areas of application are temperature simulations as well as material tests and temperature-dependent stress and load tests for automotive components and functional components.

The GL (Green Line) model variants work with the natural refrigerant carbon dioxide CO_2 and are therefore a 100% environmentally friendly alternative to appliances with synthetic refrigerants. Carbon dioxide (also known as R744) is a natural component of the air and has been used in refrigeration technology since the 19th century.

The XT model variants are designed for working temperatures up to +150 °C. Unimotive XT works with a fully integrated and variable pressure overlay.

The optionally available Flow Control Cube enables precise flow rate measurement and control (see accessories).

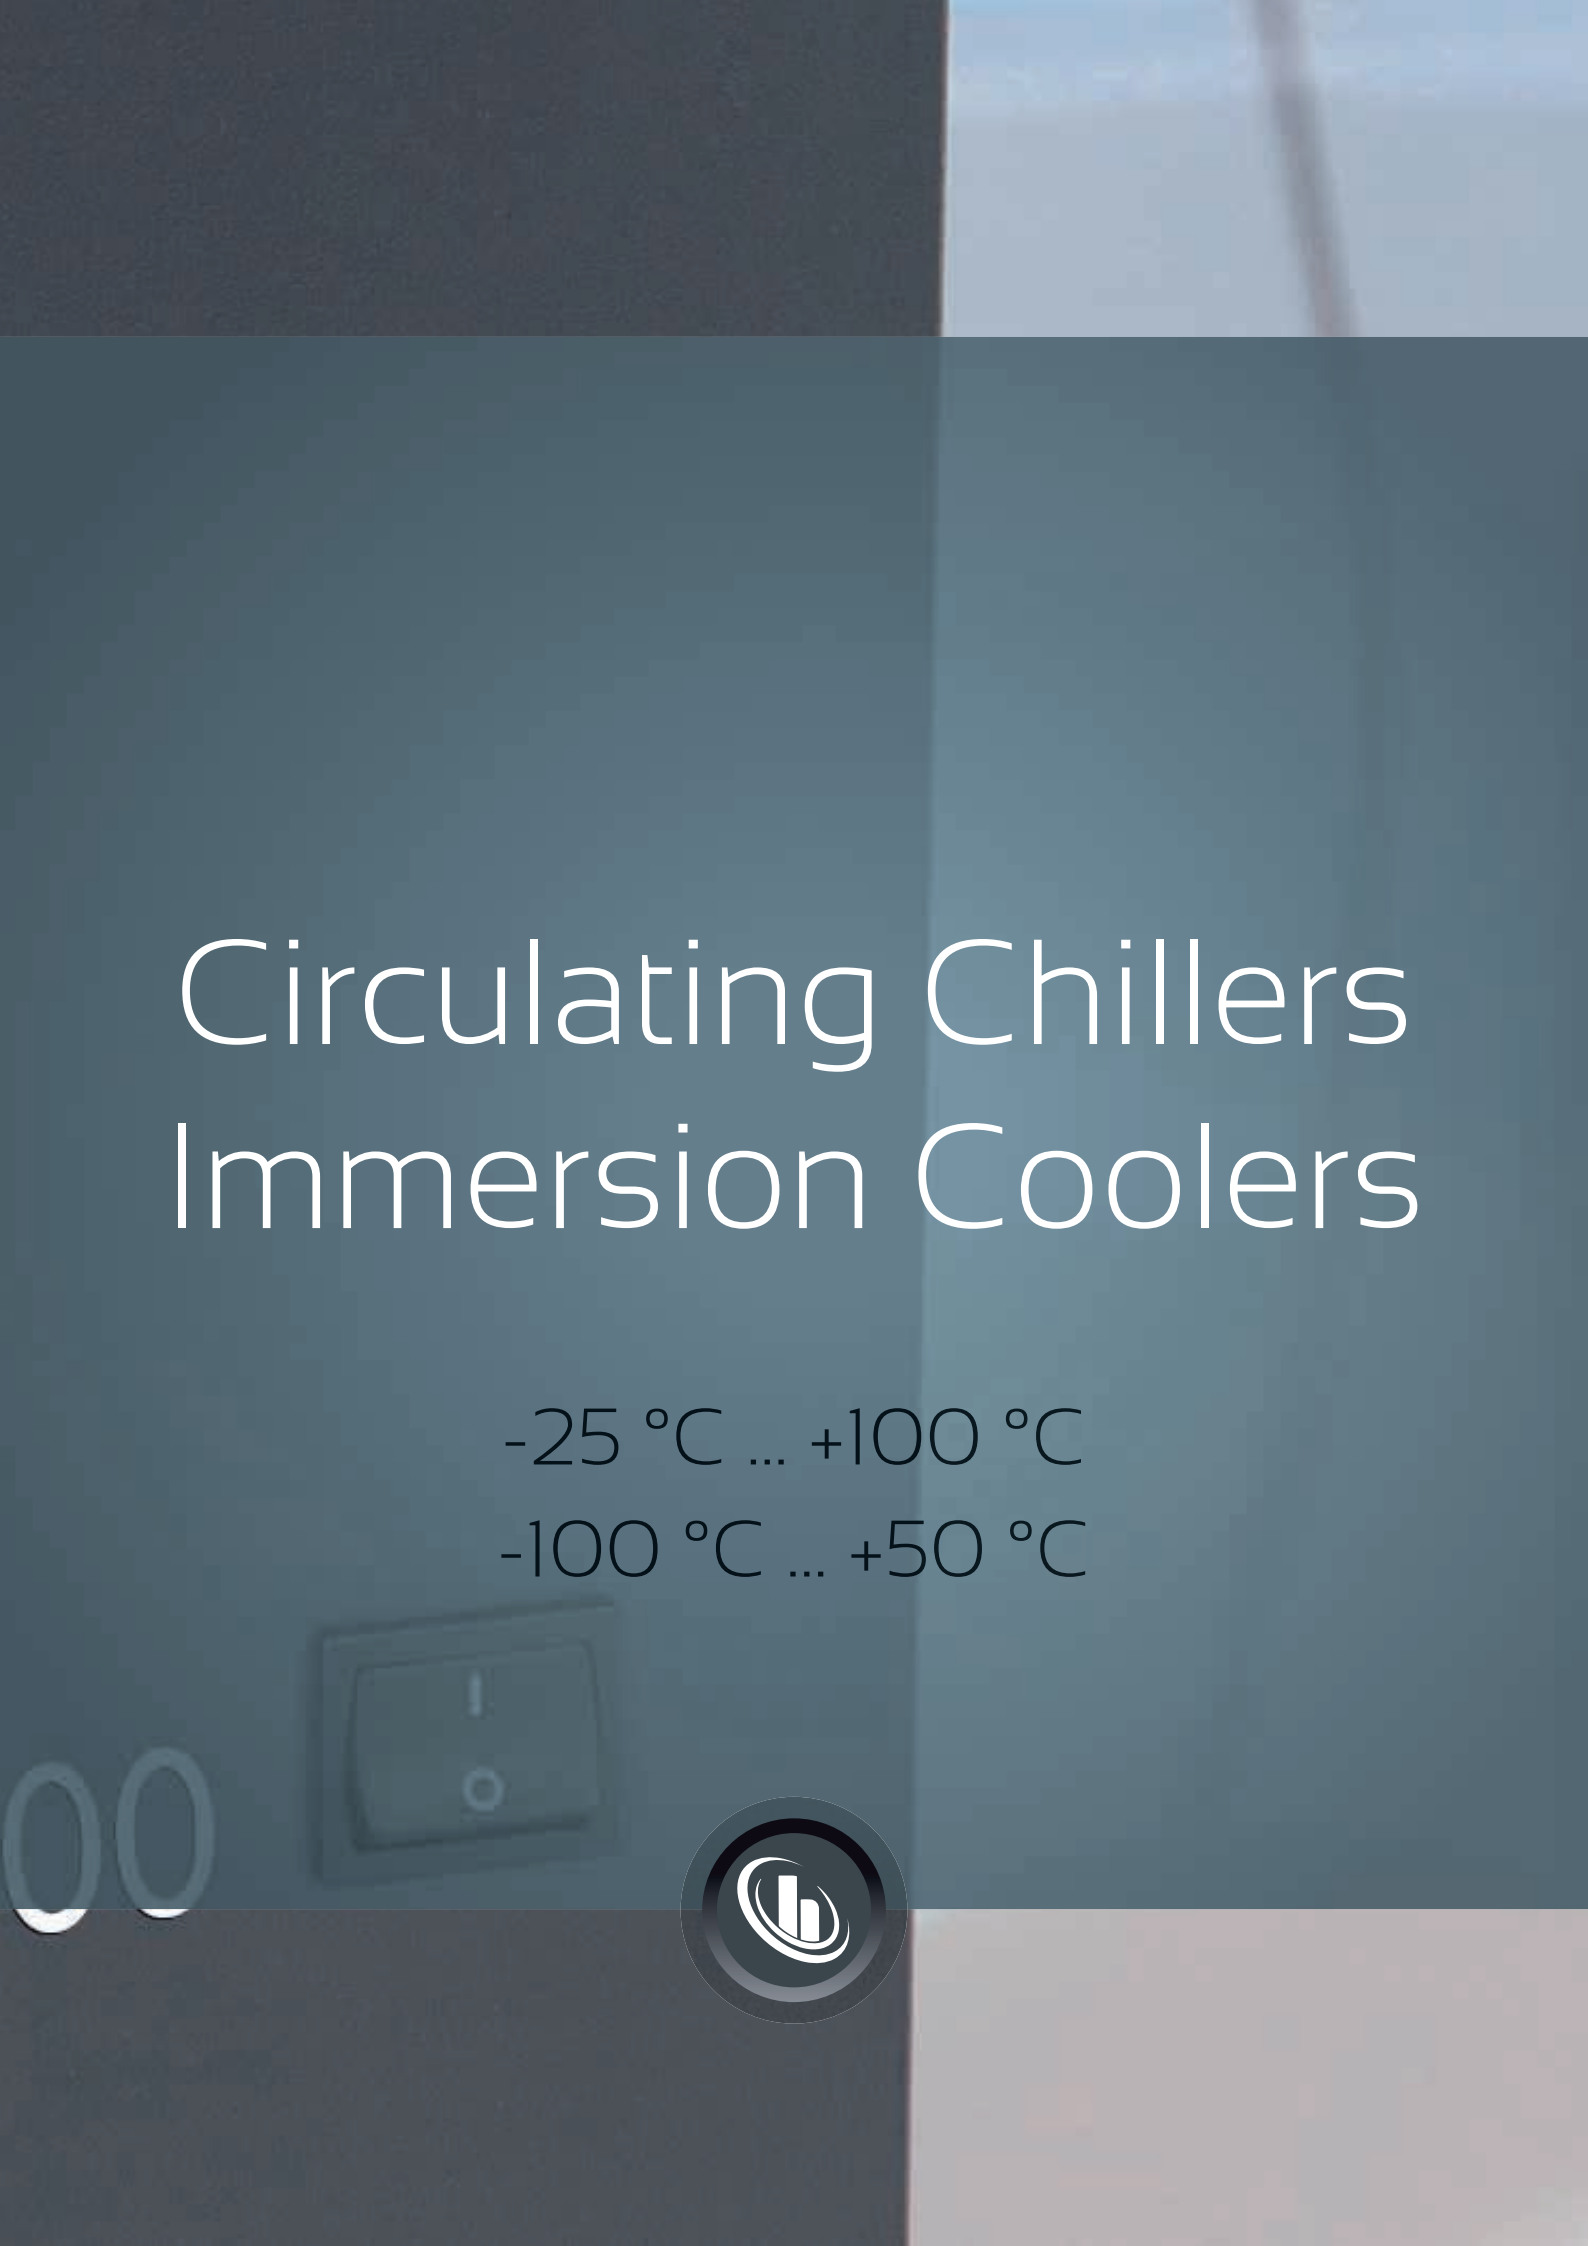
Unichillers & Minichillers: Cooling solutions for the laboratory and as fresh water replacement

Environmentally friendly and economical cooling in the laboratory and industry

HTS heat exchanger for precise temperature control of external applications



Circulating Chillers
Immersion Coolers

-25 °C ... +100 °C
-100 °C ... +50 °C

Minichillers and Unichillers are the solution for environmentally-friendly and economical cooling in the laboratory and industry

Minichillers and Unichillers are reliable and efficient

Minichillers® and Unichillers®

Huber circulation chillers have modern features, are robust and service-friendly. Perfect to dissipate process heat and to cool laboratory equipment.

Huber circulation chillers are available as air and water-cooled versions and are suited for applications in laboratory and industry with cooling capacities of 0.3 to 80 kW. These chillers offer high efficiencies, stable pressure and flow rates and a constant cooling water temperature.

The use of circulation chillers reduces the water consumption for many applications, thus protecting the environment and reducing operating costs. Huber circulation chillers are therefore a resource-saving solution, with short ROI.

Circulating Chillers
Immersion Coolers

- Circulation and immersion coolers for working temperatures down to -100 °C
- Modern energy management reduces operating costs and consumption
- With cooling capacities up to 80 kW suitable for laboratory and industry
- Reliably continuous operation at environmental temperatures up to +40 °C
- Powerful circulation pumps with flow rates up to 240 l/min
- Easy operation with large touch screen or OLED display

Circulating / Immersion Coolers

Functions and features in detail

Intelligent cooling

Minichillers and Unichillers are intelligent circulation chillers that are used as environmentally-friendly and economical cooling alternative to expensive fresh water to dissipate process heat. Low temperatures result in better efficiencies and higher recovery volumes in the condensation of processes.

In contrast to tap water cooling a desired setpoint temperature can be set. The chiller controls the cooling water temperature with high accuracy. Constant pressures and flow rates also permit better reproducibility.

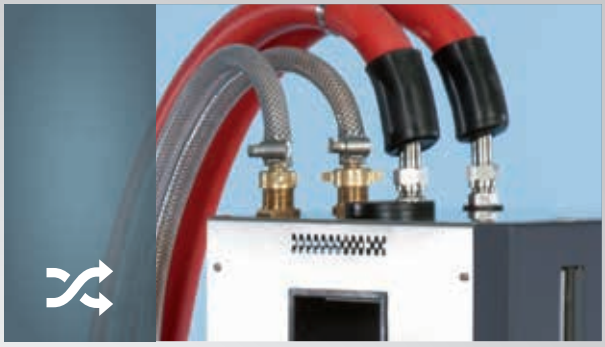
Varied use

Huber circulation chillers offer a universal solution for different applications. Typical laboratory applications include reactor blocks, autoclaves, vapour barriers, vacuum pumps, rotary evaporators, heat exchangers and microscopes, analysis and measurement devices.

The Unichillers become powerful process thermostats for temperatures up to +100 °C when fitted with optional heating. Their modern control technology ensures high temperature stability and offers various functions to also meet higher demands.

Optional heating

All circulation chillers can be factory-fitted with an optional heating and an independent overtemperature protection. The maximum working temperature is then +100 °C. The design permits continuous operation at ambient temperatures up to +40 °C.



More pump pressure

Unichiller P models are suitable for applications with high pressure loss. These circulation chillers are equipped with a high-pressure circulation pump as standard. More powerful pumps are available at request for the larger Unichiller models.

Air- and water-cooled

Huber circulation chillers are available either with air or water-cooled refrigeration machine. Depending on the model, the cooling capacities range from 0,3 to 50 kW. The compact Minichillers have been a bestseller in the laboratory for many years. The large Unichillers are a proven solution to dissipate heat in a range of industrial processes.

Economical

A sample calculation based on fresh water and drainage costs in Germany results in short ROI periods e.g. a Minichiller can save about 48,000 litres of water in a working week (5 days, 8 hours a day). Due to the low purchase price, the investment pays off just after a few months.

Circulating / Immersion Coolers

Functions and features in detail

Heat exchanger systems

The HTS models are connected to existing cooling water on the primary side and provide a secondary cooling circuit via a plate heat exchanger. The separation of the cooling water circuits is also useful for high purity specifications.

Application possibilities for the HTS heat exchangers are everywhere to be found where a cooling water supply with stable pressure and flow as well as precise adjustable working temperature is required.

Flexible immersion coolers down to -100 °C

The immersion coolers of the TC model range are a flexible solution for a range of cooling applications. The units are easy to use and are suitable for fast cooling of liquids. A typical application is the counter-cooling for heating circulators. TC immersion coolers are available without control for applications where continuous cooling is required or as an option with temperature control and Pt100 sensor.

Economical and quiet

Intelligent energy management ensures less waste heat and reduces the operating costs for power and cooling water. The cooling capacity is adjusted automatically to the requirements. In the case of air-cooled models, the noise generation is also minimised with speed-controlled and particularly quiet fans.

Inside and outside

Minichillers and Unichillers are designed for unattended continuous operation at room temperatures up to +40 °C. Unichillers can also be set up in outdoor areas with the option weather protection as well as winter or tropical mode. Thanks to the removable controller Pilot ONE the device is then remote-controlled by means of data cable.

Simple handling

Minichillers and Unichillers impress in daily work with easy handling with illuminated level indicator, overflow port and drain on the front. The filling port is on the top and therefore readily accessible at all times.

Compact and durable

All Huber circulation chillers have high-quality stainless steel housings which help to ensure a long working life. Despite their robust construction they have extremely compact dimensions and take up minimal floor space.

Circulating / Immersion Coolers

Controller features at a glance

Circulation chillers are available with OLÉ or Pilot ONE® controllers

OLÉ controller:

Simple operation
Simple 3-key operation with menu navigation in plain text.

OLED display
Large, bright OLED display with display of setpoint and actual value, Tmin, Tmax.

Basic functions
Equipped with functions for the most routine applications in the laboratory.

USB, RS232
As standard with RS232, USB and Pt100-sensor connection (option).

Pilot ONE® controller:

Ease of operation
Intuitive operation in 13 languages via touch screen and full process control.

5,7" touch colour display
Large, colour TFT touch screen with graphics function and favourites menu.

Extended professional functions
Functional features can be extended for demanding applications by means of E-grade.

Interfaces
As standard with RS232, USB and Ethernet as well as Pt100 control probe connection.

Integrated programme encoder
Programme encoder with 100 steps as well as linear and non-linear ramp function.

Record process data
Recording of process data on a connected USB medium.

[6] Via optional Com.G@te

Piccolo® 280 OLÉ

▸ Ultra-compact laboratory chiller with peltier technology

Ultra-compact, easy to handle and versatile – the new Piccolo chiller convinces entirely with state-of-the-art thermoelectric Peltier technology. This technology enables accurate and rapid heating or cooling, entirely without refrigerant, which is a clear benefit for the environment. Furthermore this model is maintenance-free.

Minichillers®

Natural Refrigerant

with OLÉ controller, air- and water-cooled models

Minichillers are a cost-effective and environmentally-friendly cooling solution for many laboratory applications and routine tasks in research and industry. Due to the low purchase price, the investment pays off after just a few months. The OLÉ controller combines modern technology and easy operation with practice-orientated features including USB, RS232 and OLED display.

RotaCool®

Natural Refrigerant

Circulating Chiller for rotary evaporator

RotaCool is a space-saving circulation chiller in L-design specifically for rotary evaporators. The additional space requirement on the laboratory bench is nil! If the rotary evaporator is attached, the RotaCool becomes almost invisible. Cooling capacity and circulation are adapted especially to meet the requirements of common rotary evaporators.

TC®

Immersion coolers

Natural Refrigerant

Immersion coolers are a flexible solution for the fast cooling of liquids and for counter-cooling of heating circulator. The devices are available without control for continuous cooling and as variant with type addition "E" with temperature control (accuracy ±0.5 K), Pt100 sensor connection (sensor in the scope of delivery) and LED temperature display with setpoint input. All models either with spiral or flexible immersion cooling probe made of stainless steel. Special evaporators for thermal analysis devices from Mettler, Perkin Elmer, Gerstel etc. available on request.

all technical data from page 148

Hotbox

Heating circulator

Circulation heaters suited for temperature control of externally open systems in compact design and for installation in systems. They are equipped with stainless steel circulation pump and adjustable overtemperature protection according to DIN 12876.

Up to +250 °C
Working temperature

Up to 96 kW
Heating power

Up to 200 l/min
Pump capacity

Pilot ONE
Touch screen controller

Advantages:

- Efficient circulation pump
- Digital level display
- Pt100 external sensor connection
- Compact design, suited for installation in systems

Application example

HB120

Model	Working temperature range (°C)	connection	Pump flow rate (l/min)	pressure max. (bar)	Heating power (kW)	Dimensions W x D x H (mm)	Cat.No.	G
HB45	45...250	M24x1,5	55	0,9	4,5	185 x 440 x 405	2030.0001.01	3
HB60	60...250	M30x1,5	90	2,5	6,0	323 x 451 x 498	2031.0004.01	3
HB120	60...250	M30x1,5	100	2,5	12,0	323 x 451 x 498	2043.0001.01	3
HB240	60...250	M30x1,5	100	3,5	21,0 - 24,0		2063.0004.01	3
HB480	60...250	M38x1,5	200	5,5	43,0 - 48,0		2064.0003.01	3
HB720	60...250	M38x1,5	200	5,5	64,0 - 72,0		2065.0003.01	3
HB960	60...250	M38x1,5	200	5,5	96,0		2066.0003.01	3

HTS

Heat exchanger systems

Heat exchanger systems with circulation pump for connection to cooling water on the primary side. The devices provide a cooling circuit with stable pressure/flow and adjustable operating temperature. The cooling capacity is generated using a plate heat exchanger via the cooling water. Since there is no active cooling machine, the devices operate in a quiet and energy-saving manner and are a cost-effective alternative to conventional chillers e.g. for the temperature control of Peltier elements, bioreactors, etc.

Down to +5 °C
Operating temperature

Up to 75 kW
Cooling power at 20 °C

Up to 240 l/min
Pump capacity

Pilot ONE
Touch screen controller

The **model HTS 1** contains the heat exchanger system, however it does **not have any temperature control**. The device is therefore suited for applications with low requirements for control accuracy.

HTS 5

Advantages:

Models HTS 3 - HTS 75:

- Efficient circulation pump
- Temperature stability ±0,1 K
- RS232 interface
- Pt100 external sensor connection
- Low cooling water usage
- Application protection with cooling stage separation

Model	Operating temperature range (°C)	Pump flow rate (l/min)	Pump pressure max. (bar)	Cooling power[3] at 20 °C (kW)	Heating power OPTIONAL (max. kW)[4]	Dimensions W x D x H (mm)	Cat.No.	G

Baths and Circulators

-90 °C ... +300 °C

KISS and CC circulators are ideally suited for quality controls, material tests, sample preparation, analytics, medical technology etc.

Modern circulators for many applications in laboratory and industry

KISS®, CC® and Ministats®

Huber bath circulators are modern classics. Robust, convincing technology and easy to operate.

The circulators are split into two product lines: the Compatible Control models and the simpler KISS models. Both product lines represent classically constructed laboratory circulators with open baths. Baths and circulators for heating applications up to +300 °C are available, as well as models for heating and cooling applications from -90 °C to +200 °C. Immersion or bridge circulators are suitable for thermal control of existing baths. The Ministats, the smallest cooling and heating circulators in the world, are the first choice for operation in fume-hoods or integrating into systems.

Bath Circulators

- Heating and cooling models for working temperatures from -90 to +300 °C
- Suitable for internal and external temperature control applications
- Extensive basic functions and function extension by E-grade
- Different device classes with heating and cooling capacities up to 7 kW
- Warning and safety functions according to DIN 12876
- Environmentally compatible with natural refrigerants

Bath Circulators

Functions and features in detail

USB and RS232

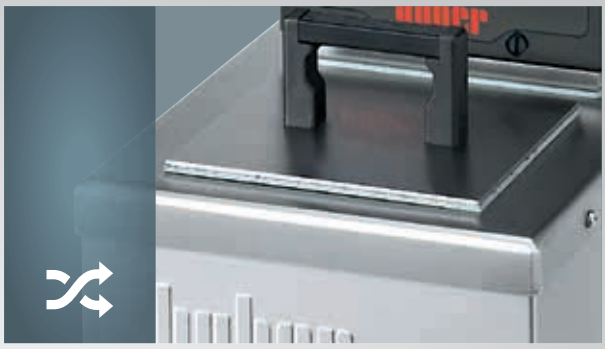
The bath circulators of the KISS, CC and Ministat series and the model Variostat are equipped with an RS232 interface as well as a USB port as standard. Remote control is possible via the interfaces, measurement data can be recorded and process data visualised.

Environmentally-friendly

All cooling circulators have Active Cooling Control for active cooling capacity control. At the peak temperature and an automatic cooling capacity adaptation for energy-saving operation and reduced heat emmission. Huber cooling circulators have been working for many years with environmentally-friendly natural refrigerants.

Modern pump technology

All models have powerful pressure and suction pumps. The circulation of the top range models with Pilot ONE can be adjusted to suit the respective bath configuration.



Robust construction

The temperature control bath is directly welded to the unit cover plate. This means that no seal is required and offers life-long protection to the insulation. The cover plate is of the cooling circulators is also passively thermoregulated (no energy consumption) to avoid condensation or ice formation.

Safety first

No compromise in terms of safety! The requirements of the highest safety classification (III/FL) according to DIN 12876 are achieved through level protection and an adjustable independent overtemperature protection.

Infinitely variable

KISS and CC thermostats are typical bath circulators and are often used for direct thermoregulation in the bath. They comprise of an immersion circulator with a bath or a cooling bath. The models are available in different sizes and versions.

Bath Circulators

Functions and features in detail

SpyControl®

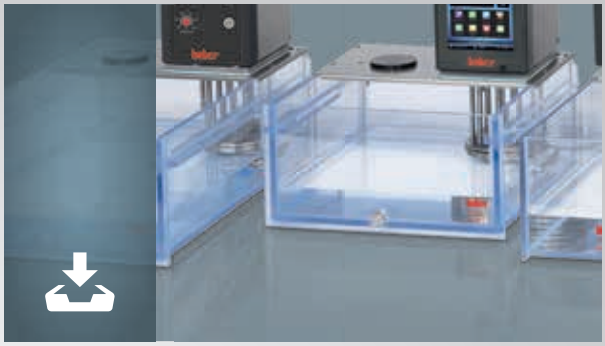
SpyControl is a software solution for Windows PCs for device control as well as for visualisation and documentation of process relevant data. Communication with the temperature control unit occurs over RS232, USB or TCP/IP.
SpyControl is characterised by a low consumption of PC resources and easy operation. The recorded data can be displayed over time. The axes of the diagram are freely scalable and a zoom function simplifies the graphical evaluation of individual time periods.

Calibration inserts

Through the use of special calibration inserts, our bath circulators can be used for the calibration of sensors, thermometers and measurement devices. When working with a calibration insert, the circulator medium flows through the heat exchanger and the distributor at the bottom into the calibration bath. This evens out temperature fluctuations so that there are virtually no gradients and no delays with quick ramps. The temperature stability can improve by a factor 5 to 10.

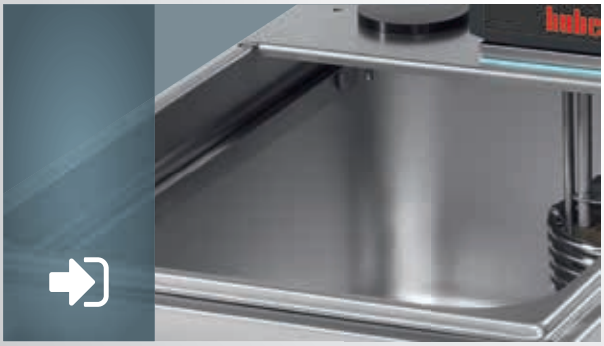
Expansion by E-grade

The electronic upgrade function offers excellent flexibility for all thermostats with Pilot ONE controller. These devices have comfortable functions already in the basic version for most typical temperature control applications. By means of E-grade the range of functions can be expanded again for special tasks.



Bath inserts and more

A comprehensive selection of accessories is available for our bath circulators to make daily work easier, e.g. test glass inserts, platforms, bath covers and Pt100 external sensors as well as hoses, thermal liquids and various adapters.



Refill automatically

Bath circulators are available with an automatic refill mechanism. A float switch controls the automatic water supply by means of a solenoid valve. If the fluid level drops, the valve opens and the bath is refilled automatically. An excessively low fluid level e.g. by evaporation, can therefore be avoided.

Displacement inserts

Displacement inserts reduce the fluid volume in the bath and thus the mass to be controlled. The smaller the mass to be cooled or heated, the faster the temperature ramp rate.

Bath Circulators

Controller features at a glance

Bath Circulators are available either with the controllers KISS® or Pilot ONE®

KISS® controller:

Simple operation
Simple 3-key operation with menu navigation in plain text.

OLED display
Large, bright OLED display with display of setpoint and actual value, Tmin, Tmax.

Basic functions
Equipped with functions for most routine applications in the laboratory.

USB, RS232
As standard with RS232, USB and Pt100-sensor connection (option).

Pilot ONE® controller:

Ease of operation
Intuitive operation in 13 languages via touch screen and full process control.

5,7" touch colour display
Large, colour TFT touch screen with graphics function and favourites menu.

Extended professional functions
Functional features can be extended for demanding applications by means of E-grade.

Interfaces
As standard with RS232, USB and Ethernet as well as Pt100 control probe connection.

Integrated programme encoder
Programme encoder with 100 steps as well as linear and non-linear ramp function.

Record process data
Recording of process data on a connected USB medium.

Bridge Circulators

for any bath

Bridge circulators can be used for the temperature control of any bath. External systems can also be controlled using the speed-controlled pressure suction pump with VPC technology. Models with greater heating capacity are suited for controlling larger bath volumes. The telescopic arms can be extended up to a maximum of 884 millimeters.

Heating Circulators

▸ with filling port, for external temperature control

Heating circulators for the temperature control of externally connected applications. The devices are equipped with baths made of stainless steel or transparent polycarbonate and have rear pump connections and a stainless steel bath cover with filling port as standard. All models have an overtemperature and low level protection of protection class III (FL) according to DIN 12876 for use with flammable liquids.

The models 202C are equipped with integrated cooling coil as standard, for models 104A it is available as an option.

Heating Bath Circulators

▸ with open bath, for internal and external temperature control

Heating circulators for the temperature control of externally connected applications. Furthermore it is possible to thermoregulate any objects directly in the circulator bath. The devices are equipped with durable baths made from high-grade stainless steel and have pump connections at the rear as standard. All models have overtemperature and low level protection to protection class III (FL) according to DIN 12876 for use with flammable liquids.

Ministats®

Our smallest cooling circulators

Natural Refrigerant

Ministats are the smallest cooling circulators in the world and permit operation in the smallest of spaces, for example in a fume hood or within technical systems. The devices have a wide range of features and are ideally suited for the temperature control of photometers, refractometers, viscometers, distillation apparatus, reaction vessels and Miniplant facilities. The application focus is on external applications – the bath opening, however, also permits the thermoregulation of smaller objects directly in the circulator bath.

Variostat®

Cooling circulator for variable baths

Natural Refrigerant

The Variostat can control the temperature of a wide range of bath dimensions. The special construction permits greatest flexibility for the user. The circulation can be adjusted to suit the bath size using the stepless variable speed suction/pressure pump. The pump pressure can also be controlled with an optional pressure sensor for external applications.

Insulated stainless steel baths are available in three standard sizes or can be made to measure.

Natural Refrigerant

for internal temperature control

Cooling bath circulators with insulated baths made of stainless steel are cost-effective solutions for the temperature control of objects directly in the bath. Using a pump adapter (accessory), the devices can be used for both externally closed and externally open (with option level control) temperature control applications. The cooling circulators work in an environmentally and climate friendly manner using a natural refrigerant.

Cooling Circulators

Serie CC-400

Cooling bath circulators with insulated baths made from stainless steel. The devices have a temperature controlled bath cover plate to prevent the formation of ice or condensation in the bath, and are suited for the temperature control of external applications and temperature control of objects directly in the circulator bath. Typical applications are, for example, photometers, refractometers, viscometers, double-walled reaction vessels and autoclaves. Depending on the model, the devices can be used in Miniplant facilities, kilo laboratories, for the determination of freezing point, for low-temperature calibration, for petroleum testing, for temperature control of measuring instruments and test set-ups as well as for material testing, quality control and many more. Equipped with a professional range of functions of the Pilot ONE controller, high requirements are met.

A powerful pressure/suction pump ensures good circulation and heat transfer to the application. The pump speed is controlled steplessly, the pressure can also be controlled using an optional pressure sensor.

The cooling circulators of the CC model range have Active Cooling Control for active cooling capacity control at the peak temperature and an automatic cooling capacity adaptation for energy-saving operation and reduced waste heat. The cover plate is temperature-controlled to prevent the formation of ice.

Heat transfer fluids

Heat transfer fluids for optimal performance

Huber heat transfer fluids have excellent thermo-dynamic and environmentally-friendly properties. The correct selection is crucial and depends on the permissible temperature range. The observance of recommendations regarding use guarantees reliable and safe operation and maximises the service life of the fluid. The safety data sheets are available for download at www.huber-online.com.

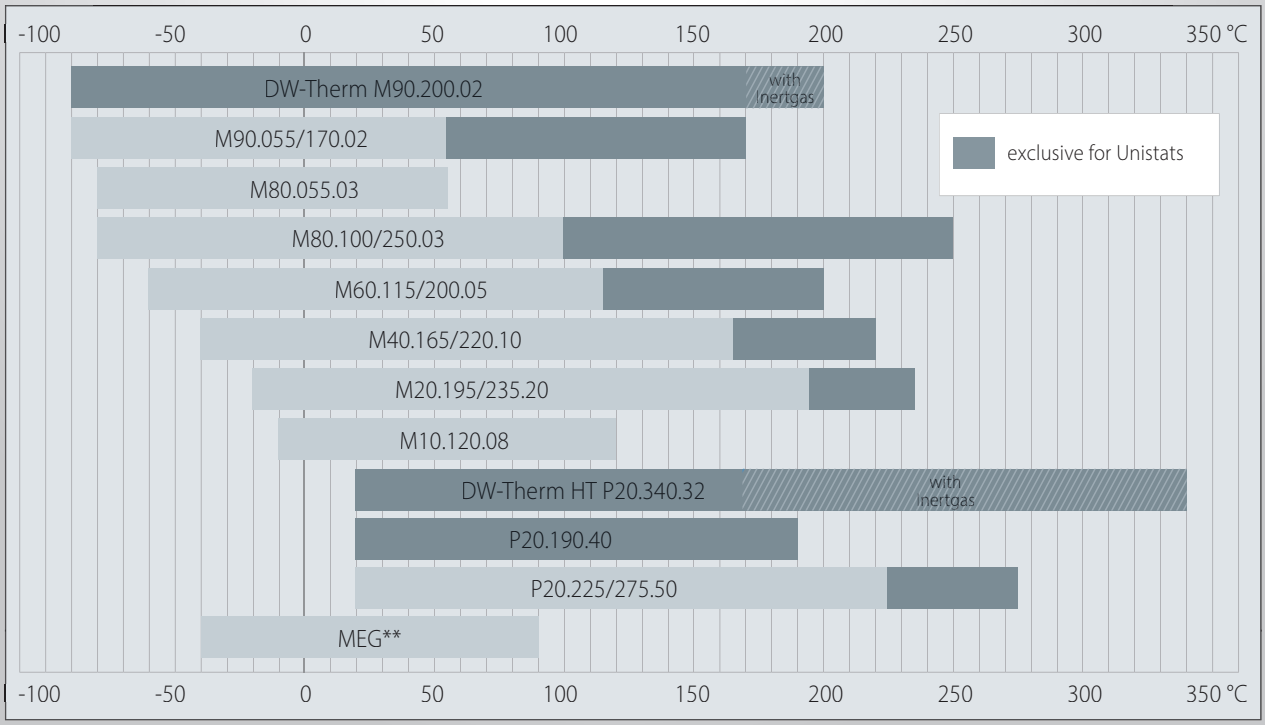
Drain valve for heat transfer fluid	1	31735

Working temperature ranges



Which heat transfer fluid is suitable?

The table shows an indicative overview of the heat transfer fluids that may be used in each unit. When selecting the thermal fluids, the operating temperatures, the operating instructions and the data sheet of the temperature control unit as well as application-specific features must be observed.

Quick-disconnect adapters

Quick-disconnect adapters for frequent changes of application (e.g. reactor) on the temperature control device. The quick-release connectors meet the special requirements in temperature control technology and reliably prevent the leaking of heat transfer fluid. The quick-release connectors ensure only minor pressure losses and thus ensure good performance of the overall system.

Flow rate measuring

▸ for Unichillers® and Unistats®

Flow rate measuring devices to be installed in the temperature control fluid circuit for measurement and control of Heat Transfer Fluid flow rate. The flow rate can be displayed directly on the Pilot ONE and also be transmitted via the digital interfaces (USB, RS232, LAN and optional RS485, Profibus). It is also possible to control the flow rate, therefore a temperature control unit with an integrated VPC bypass or an external VPC bypass as an accessory is required.

The flow rate measurement allows essential functions such as finding the Kinetics/Dynamics of reaction synthesis and crystallisation, heat flow investigation and scale-up in process technology. Further information available on request.

Connection thread*	Temperature range (°C)	Flow rate (l/min)	Measurement accuracy (%)	Cat.No.	G
Flow rate measuring device MID, only suitable for conductive heat transfer fluids

Flow Control Cube

▸ Flow measurement and control

The Flow Control Cubes are used to measure and control the flow and pressure of the thermal fluid. They can be used with Huber temperature control units with Pilot ONE technology. The flow measurement is carried out with magnetically-inductive flow meters (MID) for electrically conductive liquids (e.g. water-glycol mixtures) or via a turbine flow meters (TURB). The TURB flowmeters can be calibrated for various liquids (e.g. silicone oils or water-glycol mixtures). With CORE, the measurement is based on the Coriolis measuring method. An individual calibration for the liquid used is not necessary and can be used universally for different temperature control media. In comparison to FCC, M-FCC has an independent controller, i.e. control takes place autonomously and communication with the Pilot ONE of the temperature control unit is not necessary. With M-FCC, multi-circuit control can be realised.

Accessories for Unistats®

Explosion proof enclosures

Our temperature control solution for explosion-proof areas includes a pressurised enclosure into which a water-cooled temperature control unit is integrated. The overlay gas creates an overpressure in the housing to prevent the ingress of an explosive gas mixture.

The ATEX housing can only be ordered in combination with a water-cooled Unistat. The size of the enclosure depends on the size of the selected Unistat.

Features:

- Only for water-cooled Unistats
- Pressurised enclosure
- Excess temperature control
- Leak detection
- Ex II 2 G Ex pxb IIB T4 Gb

Technical Data:

- Housing material: stainless steel
- Superimposed gas: compressed air
- Pressure connection: R1/4"
- Cooling water connection: R3/4"
- Power supply: 400V 3~50 Hz

Scope of delivery:

- Control of print overlay Ex px cabinet
- Isolator for external Pt100 temperature sensor
- Isolator for Ethernet connection
- Operation instructions for Ex px cabinet
- Approval description for Ex II 2 G Ex pxb IIB T4 Gb
- Documentation

User interface

The temperature control unit can still be operated via the Pilot ONE using the touch screen. The touch screen is protected by a flap with a viewing window.

Remote control EEX Panel

Robust industrial panel for ATEX environments for remote control of Huber devices with Pilot ONE.

10394

- 15" TFT touch screen (1024 x 768 px)
- Stainless steel housing IP54 for wall mounting
- Explosion protection zone 1 and 21
- Power supply AC 100-230 V
- Ethernet interface 100 / 1 Base T
- Windows 7 Embedded MUI operating system
- Including software SpyControl, #66108
- Pilot ONE Remote Software ATEX optional, #10646
- 25 m Ethernet cable with open end

Approval:

- Ex II 2G Ex db eb qb [ib op pr] IIC T4
- Ex II 2D Ex tb IIIC T120 °C
- Ex db eb qb [ib op pr] IIC T4
- Ex tb IIIC T120 °C IMMETRO
- GOST-R

High precision calibration

Calibration is a comparison between a measurement system and a reference or standard. During the comparison it is established how large the deviation between the two values or if the value lies within the specified limits. Calibration is normally carried out in accordance with rigorous national or international standards. Meaningful and comparable measurements around the world require calibrated instruments. The quality of measurements is defined in terms of tolerance and repeatability, and is only achievable with the use of calibrated measurement devices or by adjusting sensors. Calibration baths are used in quality management departments of industry and research. The modular concept based on the combination of a calibration bath with a Unistat, which dictates the temperature range and speed of temperature change. The stainless steel calibration bath is designed in a similar format to a calorimeter to ensure temperature homogeneity. Baths with a 118 mm diameter and depth of 384 mm are offered for calibration of measurement and control sensors. The calibration space is freely accessible and symmetrical. The upper edge is designed to allow exact reading of the temperature measured by glass thermometers and also offers a tight seal for the customer specific bath lid. The calibration space of the baths can be customised to suit specific customer requirements.

Accessories	Temperature range (°C)	Cat.No.	G
Bath covers stainless steel*	-100...300	6367	1
Bath covers PTFE*	-100...200	6365	1

* Additional cost for holes

Advantages:

- Temperature stability up to ± 0,002 K
- Temperature homogeneity better than ± 0,01 K
- External overflow vessel
- 5-point calibration of the control sensor

The insulated stainless steel or PTFE bath covers allow for individual data recordings for sensors and thermometers, etc. We can custom design and manufacture the covers to your specifications (additional cost).

See page 125 for the calibration inserts for our bath circulators.

Accessories for data communication

10503 / 522248

Profibus, Profinet

This accessory enables the connection of Huber units to Profibus/Profinet systems, offering a comprehensive range of possibilities for data communication with PLC and process control systems.

Profibus/Profinet solutions for units with Pilot ONE	Cat.No.	G
Profibus Gateway DP-V1, external	10503	3
Profibus Gateway DP-V0, external	522248	3
Profinet Gateway, external	10965	3

Com.G@te

509056

519484

519485

Units with the Pilot ONE controller have USB and LAN connections fitted as standard. For applications where additional connections are required, depending on the model, the following optional interface modules are available:

Com.G@te D/A internal and Com.G@te D/A external

- Digital input: ECS
- Digital output: POKO
- Analogue interface:
  - 1 input 4-20 mA / 0-10 V (switchable)
  - 3 outputs 4-20 mA / 0-10 V (switchable)
- RS232 interface
- Up to three Com.G@tes can be combined per temperature control unit, depending on the version of the temperature control unit

Com.G@te D internal

- Digital input: ECS
- Digital output: POKO
- RS232 interface
- Up to three Com.G@tes can be combined per temperature control unit, depending on the version of the temperature control unit

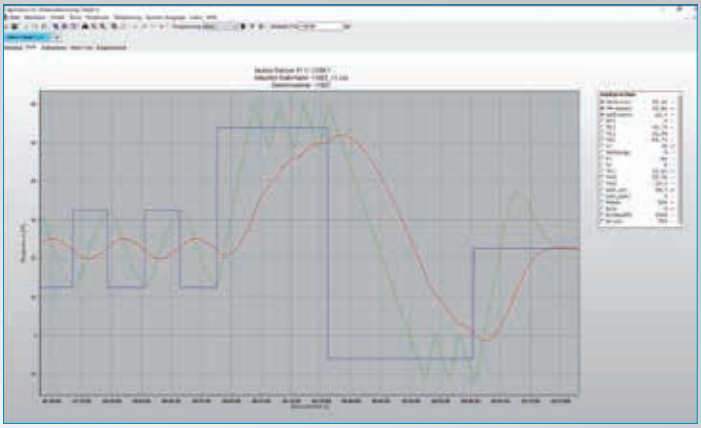
Software, E-grades®

Data communication, Functional extensions

SpyControl®

SpyControl is a software solution for Windows PCs for device control as well as for visualisation and documentation of process relevant data. Communication with the temperature control unit occurs over RS232, USB or TCP/IP. Recorded data are displayed over a time axis, with freely scalable axes of the diagram. A zoom function simplifies the graphical evaluation of individual time segments.

The charged full version (license key required) supports the communication with up to 10 devices simultaneously and offers additional functions. The setpoint can be specified for each channel. In addition, a start/stop function and a switchover between internal and process temperature control is possible. The temperature values and other process data can be recorded and stored as CSV file. A programmer function with user-friendly graphic editor can be used to create a self-running temperature profile for 1 channel.



Huber Software	Cat.No.	G
SpyControl	66108	1

The installation package includes a free version for recording from one device as well as a 30-day trial of the full version. If you want to continue using the trial version after the trial period has expired, you must purchase a license key.

E-grade Remote GUI

The optional E-grade Remote GUI allows remote control of the Huber temperature control units with Pilot ONE. All functions that are available locally on the Pilot ONE can be displayed and operated identically via the Pilot Remote software on any PC / laptop operating with Microsoft Windows. It is ideal for remote monitoring or remote control within a network (LAN). For example, several Huber units in different rooms can be displayed centrally on one PC. The E-grade Remote GUI can be used to control the temperature control system either locally or from a PC. This allows centralised visualisation and operation. The Pilot Remote software can be downloaded free of charge from our website.

E-grade for Pilot ONE	Cat.No.	G
E-grade Remote GUI	520450	99

E-grades®
Exclusive, Professional, Explore

Models with Pilot ONE already have a wide ranging functionality for classic temperature-control applications in the basic version. Per E-grade this functionality can be extended at any time and thus adapted to suit special tasks and the budget. Only a device-specific activation key must be entered on the device.

E-grade Explore offers the widest range of functions. It allows detailed information on temperatures, heating/cooling capacity and pump capacity to be displayed directly on the Pilot ONE. It also displays vital values of application during process development and scale-up trials.

E-grade Explore

E-grade for Pilot ONE	Cat.No.	G
E-grade Basic (standard for thermostats and chillers)	–	–
E-grade Exclusive additionally with process temperature control, programme encoder (3x5 steps), ramp function (linear), TAC, USB-process data recording	9495	99
E-grade Professional (standard for Unistats) additionally with programme encoder (10x10 steps), 2. setpoint, calendar start, ramp function (linear, non-linear), customisable user menus	9496	99
E-grade Explore (Optional for Unistats) enables the following process data to be displayed: - Current heating or cooling capacity of the system - Setpoint, internal, process, return temperatures - ΔT internal return, ΔT process return, ΔT process internal - Volumetric flow of thermal fluid (dependent on availability of signal)	10495	99

E-grade® OPC-UA

The OPC UA (OPC Unified Architecture) communication protocol semantically describes data and thus allows a data exchange between automation systems without the need to program a driver. Huber temperature control units with Pilot ONE can already communicate via the modern OPC UA protocol by using the E-grade OPC UA.

Simple options to boost performance

- Reducing the bath volume reduces the thermal load and leads to faster ramping times
- Reduce the liquid´s exposed surface area, which reduces moisture absorption
- Contain the expansion volume HTF and prevent the bath from overflowing

Function principle

The heat transfer fluid at constant temperature flows through the heat exchanger (A) and via the distributor pipe (B) down into the calibrating bath. Temperature fluctuations in the circulator are evened out in (A). There are virtually no gradients and no delay in the case of swift ramps. Temperature stability can be improved by a factor of 5 to 10.
Please also see the calibration bath “Unical 700“ for our Unistats temperature control systems on 117.

Accessories for circulators

Baths, tubs

Cooling baths

The cooling baths K12 to K25 use natural refrigerants. In combination with an immersion circulator these cooling systems offer active cooling, in continuous operation over the complete working range.

Model	Temperature range (°C)	opening W x D (mm)	Bath depth (mm)	volume (ltr)	Cooling power (kW) at 0°C	-10°C	-20°C	Dimensions W x D x H (mm)	Cat.No.	G

Stainless steel baths

Insulated stainless steel baths are available in three standard sizes. They can be customised to suit requirements at additional cost with the addition of inlet/outlet connections for either direct flow into the bath or into the jacket of the bath.

The drain is fitted as shown but can be fitted on the long side on request.
The order number has the suffix -L (e.g. 6052-L).

Stainless steel bath	Bath depth (mm)	Opening W x D (mm)	Dimensions W x D x H (mm)	Cat.No.	G

DS level controller for external open baths, only suitable for units with pressure and suction pump and Minichillers. Useable for baths with a maximum wall thickness of 26 mm.	9580	1
Holder for Ubbelohde-Viscosimeter for Visco 3	9586	2

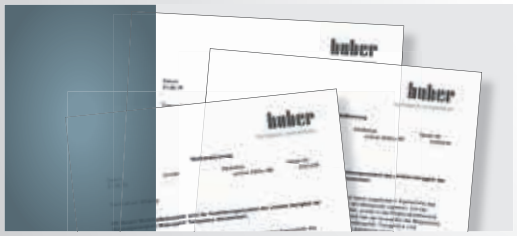
Service agreements

Regular checking and servicing of your unit is the best protection for minimising down time, and also serves for long life and maintains the value of the unit. A regular professional check of your system also ensures control accuracy and economy.

	Cat.No.	G
Service agreements for circulators	9665	99
A standard agreement with regular checking of all safety devices and machine functions, as well as checking of cooling and heating performance for any visible wear. Inclusive service protocol and data logging with every service. Service interval and work performed can be individually customised to suit individual requirements. For more information contact your local distributor.		

Certificates / Calibration

If required, you can obtain a factory calibration certificate. Test protocol and other certification for your Huber unit is available on request.



Document	Cat.No.	G
Factory calibration certificate – temperature stability to DIN 12876	6252	99
Factory calibration certificate – absolute accuracy	6905	99
Testing protocol FAT (Final Acceptance Test)	9778	99
Analysis certificate for heat transfer fluid	9669	99

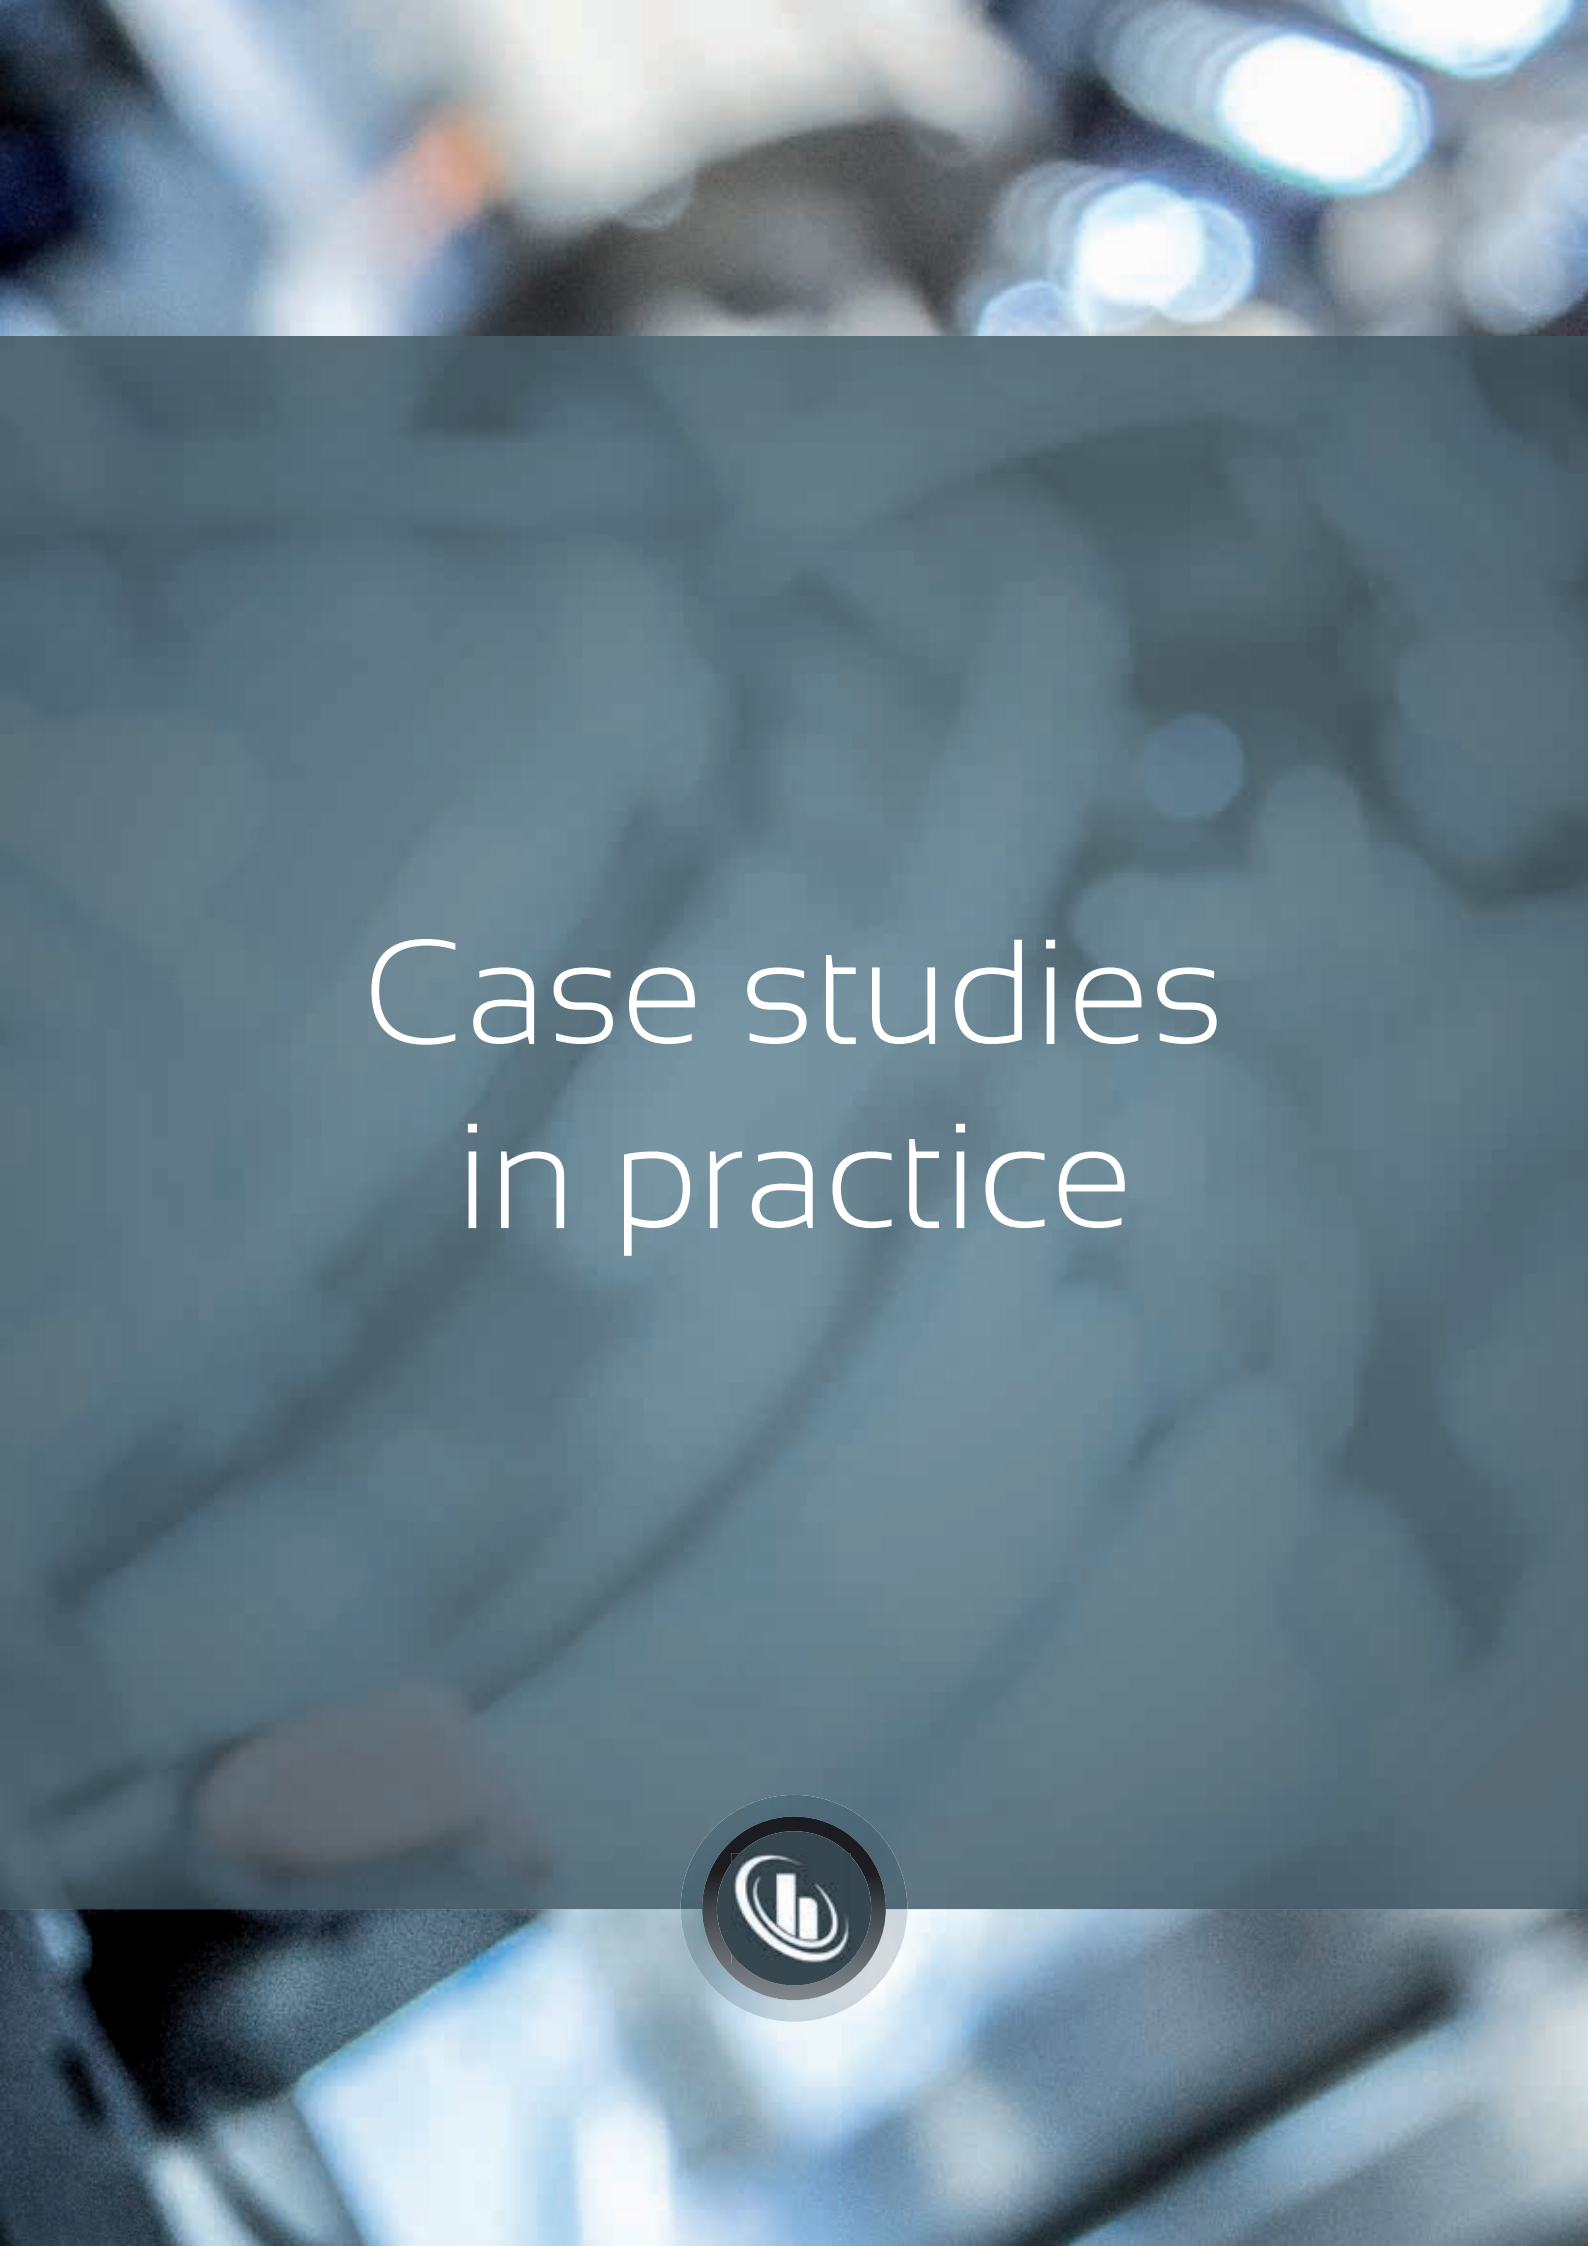
4-year warranty package

We offer an extensive warranty extension with numerous benefits. To take advantage of this option an online registration of the Huber unit is required. The standard warranty is for 12 months from the shipping date (Ex Works Offenburg, Germany).
The 4-year warranty is provided at no extra cost. Registration of the end customer's address must be completed within 3 months from the delivery date.

Our warranty periods after registration:

4 years for all electronic, electrical, refrigeration and mechanical components

More than 200 case studies on www.huber-online.com support you in the purchasing decision.



Case studies in practice

Unistat®
Petite Fleur®

CS 1219

Baby Tango® – Petite Fleur® – controlling Syrris 2-litre triple wall reactor

Requirement

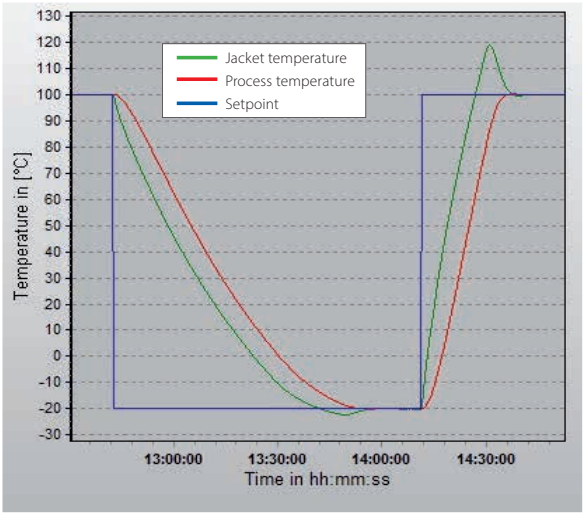
This case study demonstrates the closeness of the temperature control and the minimum process temperature achievable in the process mass.

Method

The 2-litre Syrris reactor was connected to Petite Fleur using two M16x1 1-meter flexible hoses. The heat transfer fluid used in the system was "M90.055.03". "Process" control was carried out via a Pt100 sensor located in the "process" mass. Stirrer speed was set to 450 rpm.

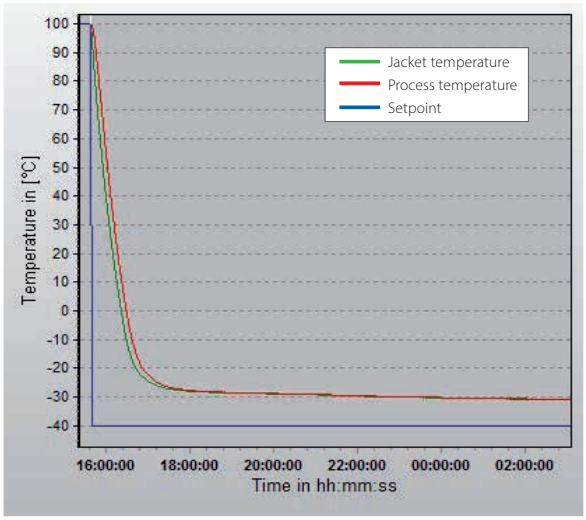
Setup details

Temperature range:	-40 °C...+200 °C
Cooling power:	0,48 kW @ +20°C
	0,48 kW @ +200°C
	0,45 kW @ 0°C
	0,27 kW @ -20°C
	0,16 kW @ -30°C
Heating power:	1,5 kW
Hoses:	M16x1; 2* 1 m
Heat transfer fluid:	M90.055.03
Reactor:	Syriss 2-litre insulated reactor
Reactor content:	1 litre M40.165.10
Stirrer speed:	450 rpm
Control:	process



Results Performance

To demonstrate the efficient performance of the Petite Fleur, this graphic shows that it can cool the process in a 2-litre glass reactor from 100°C to -20°C in approximately 70 minutes, hitting and stabilizing exactly on the set-point. A rapid heat-up time of less than 30 minutes from -20°C to 100°C with the same accuracy can also be seen.



Lowest achievable temperature:

Once stable at +100°C under "Process" control, a set-point of -40°C is entered. The Petite Fleur cools the reactor down to the minimum achievable process temperature of -31°C.

Unistat®
Grande Fleur®

CS 1243

Controlling QVF 6 litre reactor

Requirement

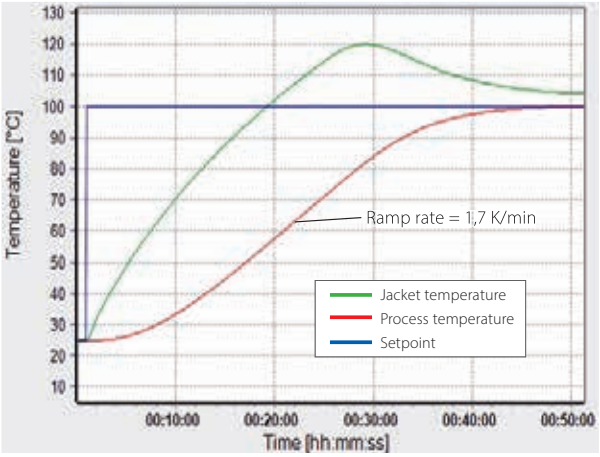
This Case Study examines the cooling, heating and temperature control capabilities of the Unistat Grande Fleur connected to an uninsulated QVF 6-litre glass jacketed reactor.

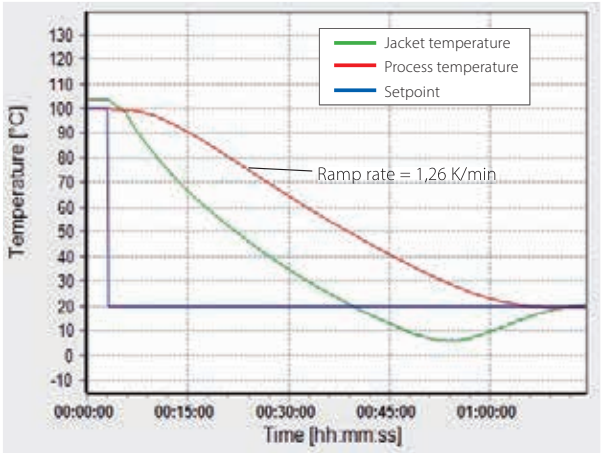
Method

The 6 litre QVF reactor was connected to Grande Fleur using two M16 1-meter flexible hoses. The heat transfer fluid used in the system was "M40.165/220.10 (6 l). "Process" control was carried out via a Pt100 sensor located in the "process" mass. Stirrer speed was set to 270 rpm.

Setup details

Temperature range:	-40°C...+200°C
Cooling power:	0,60 kW @ +20°C
	0,60 kW @ +200°C
	0,60 kW @ 0°C
	0,35 kW @ -20°C
	0,20 kW @ -30°C
Heating power:	1,5 kW
Hoses:	M16; 2x1 m
Heat transfer fluid:	M40.165/220.10
Reactor:	QVF 6 litre glass jacketed reactor
Reactor content:	5 litre M40.165/220.10
Stirrer speed:	270 rpm
Control:	process





Results Performance

The first graphic shows the time taken to heat the process from 25°C to 100°C. It can be seen that it takes approximately 43 minutes with the process temperature reaching and stabilising at the new set-point perfectly.

The second graphic shows the time taken to cool the process from 100°C to 20°C. It can be seen that the time taken is approximately 64 minutes, again the stability and accuracy of the control is clearly demonstrated.

CS 19

Unistat® Tango®

Heating and cooling ramps with a 1-litre Buchi Glas Uster reactor

Requirement

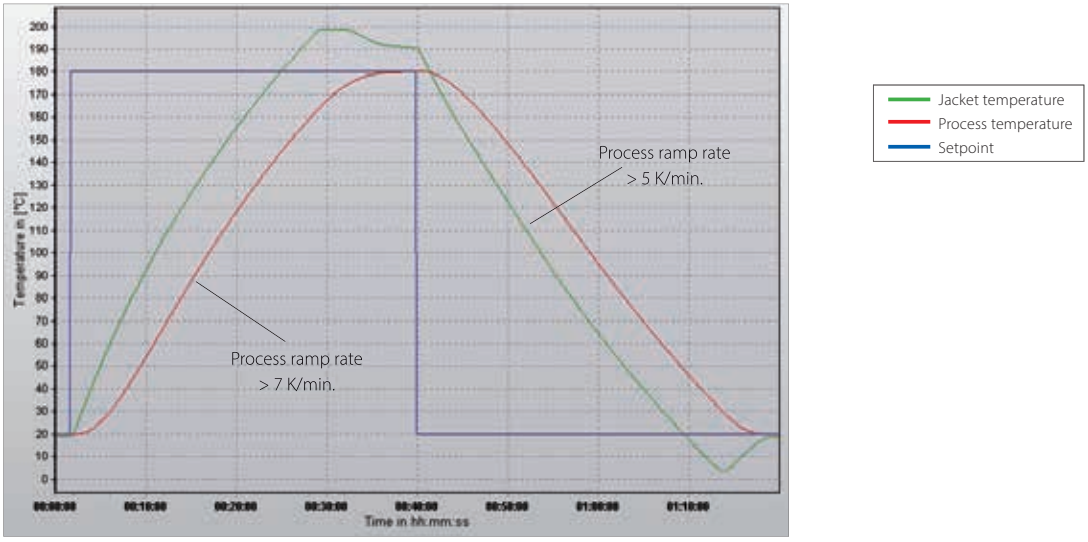
This case study looks at the speed at which the Unistat Tango can heat and cool the process in a 1-litre un-insulated glass pressure reactor.

Method

Using two large diametre (M24x1,5 DN12) insulated metal hoses, the reactor was connected to the Unistat Tango. The reactor was filled with 0.75-litre of "M90.055.03", a Huber supplied silicon based heat transfer fluid.

Setup details

Temperature range:	-45...250 °C
Cooling power:	0.7 kW @ 250…0 °C
	0.4 kW @ -20 °C
Heating power:	1.5 kW
Hoses:	2x1 m; M24x1.5 (#9325)
Heat transfer fluid:	DW-Therm (#6479)
Reactor:	1-litre un-insulated glass pressure reactor glass pressure reactor
Reactor content:	0.75 litre M90.055.03 (#6259)
Stirrer speed:	500 rpm
Control:	process



Results

Efficient thermal transfer made possible by the low flow resistance of the wide bore tubing coupled with the highly efficient thermal transfer capabilities of the Unistat Tango Technology results in a rapid ramping rate and extremely stable control. The diagram illustrates a heating curve from 20 °C to 180 °C in a time of 37 minutes and back to 20 °C in 38 minutes. The process temperature reached both set-points without any overshoot demonstrating the capability of the controller to ramp temperatures with speed and accuracy.

CS 1212

Unistat® 410w

Unistat® 410w cycling a 50-litre Chemglass un-insulated glass jacketed reactor between 100 °C and -15 °C

Requirement

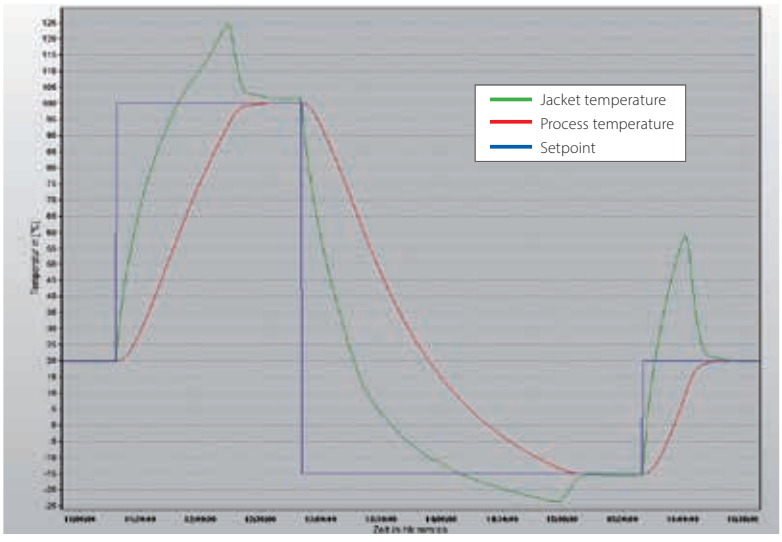
The Unistat 410w is a bench top model with small dimensions but has 2,5 kW of cooling at 100 °C and 1,5 kW at 0 °C. Heating power of 3 kW makes this compact unit a good choice for comparatively large reactors above 0 °C as this case study shows.

Method

The reactor was filled with 34,5 litre of Huber's silicon based Heat Transfer Fluid (HTF) "M90.055.03", the stirrer speed was set to 100 rpm and control to "Process" control. The unit was cycled between 20 °C to 100 °C then to -15 °C before being returned to 20 °C.

Setup details

Temperature range:	-45...250 °C
Cooling power:	1,5 kW @ 0 °C 0,8 kW @ -20 °C 0,2 kW @ -40 °C
Heating power:	1,5/3,0 kW
Hoses:	1x2 m; M30x1,5 (#6427) 1x1 m; M30x1,5 (#6426)
Heat transfer fluid:	M90.055.03 (#6259)
Reactor:	50-litre un-insulated jacketed glass reactor
Reactor content:	34,5 litre M90.055.03 (#6259)
Stirrer speed:	100 rpm
Control:	process



Results

It can be seen in the graphic that the Unistat 410w heats the process from 20 °C to 100 °C in approximately 1 hour. Cooling from 100 °C to -15 °C takes approximately 2,5 hours.
Given the physical size of the Huber Unistat 410w, its performance on a 50-litre un-insulated reactor is remarkable. The tightness of control as the process temperature reaches set point and the stability can clearly be seen.

CS 1102

Unistat® 510w

Cooling a Chemglass 50-litre jacketed glass reactor from 20 °C to T_{min}

Requirement

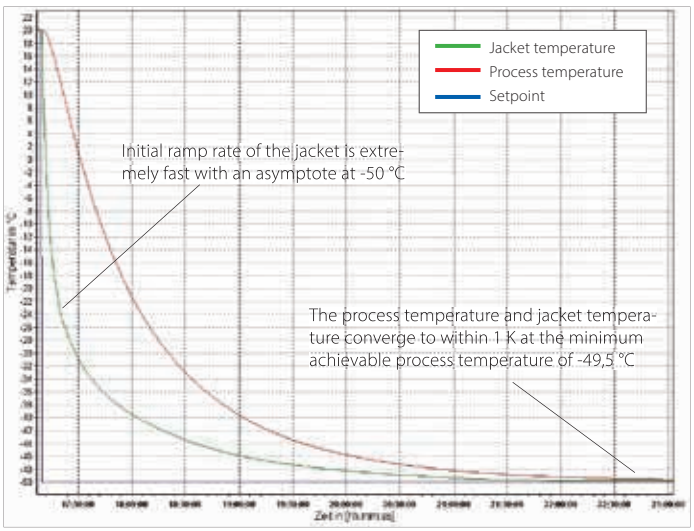
This case study examines the minimum achievable process temperature within a Chemglass 50-litre jacketed glass reactor when connected to a Huber Unistat 510w.

Method

The Unistat and reactor were connected using two 1,5 m insulated metal hoses. The reactor was filled with 37 litre of "M90.055.03", a Huber supplied silicon based heat transfer fluid.

Setup details

Temperature range:	-50 °C...+250 °C
Cooling power:	5,3 kW @ 250…0 °C
	2,8 kW @ -20 °C
	0,9 kW @ -40 °C
Heating power:	6,0 kW
Hoses:	2x1,5 m; M38x1,5 (#6659)
Heat transfer fluid:	DW-Therm (#6479)
Reactor:	50-litre Chemglass jacketed reactor (un-insulated)
Reactor content:	37 litre M90.055.03
Stirrer speed:	80 rpm
Control:	process



Results

As can be seen in the graphic, the jacket achieves a temperature of approximately -50 °C and the process temperature asymptotes just above this at approximately -49 °C.

CS 32

Unistat® 925w

Predictable and repeatable control of a Buchi Glas Uster CR252 GLSS reactor

Requirement

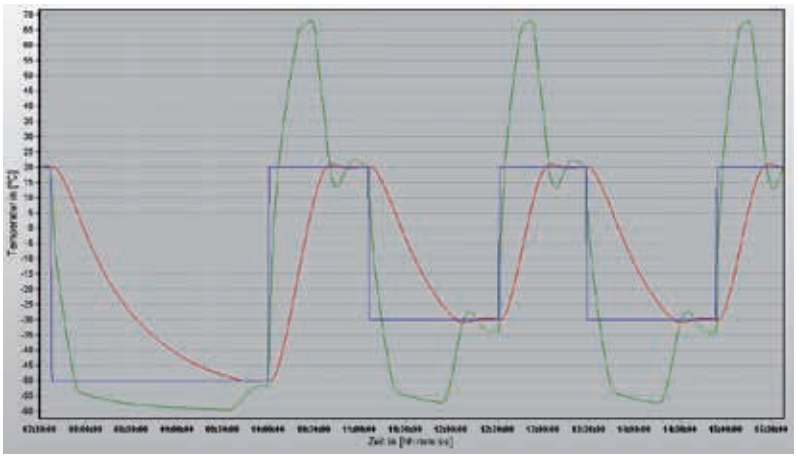
This case study examines the performance of a Unistat 925w when connected to a Buchi Glas Uster 250-litre insulated jacketed GLSS reactor.

Method

The Unistat and reactor are connected using two 2-metre insulated metal hoses. The reactor is filled with 200 litre of Ethanol.

Setup details

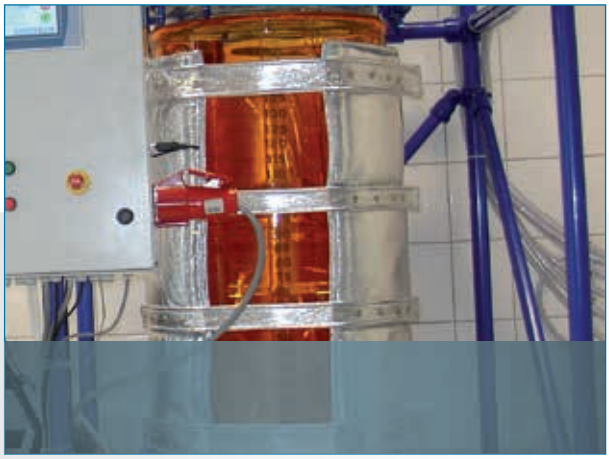
Temperature range:	-90 °C...+200 °C
Cooling power:	16 kW @ 200…–20 °C
	15 kW @ –40 °C
	13,5 kW @ –60 °C
Heating power:	24 kW
Hoses:	M38x1,5; 2*2 m
Heat transfer fluid:	DW-Therm
Reactor:	Buchi Glas Uster CR252 250-litre insulated jacketed reactor
Reactor content:	200 litre Ethanol
Stirrer speed:	90 rpm
Control:	process



Results

The minimum jacket temperature of the Buchi Glas Uster reactor was limited to -60 °C as was the ramp rate to avoid damaging the glass lining. It can be seen that the Unistat 925w was still well within its maximum performance capabilities at this temperature. The first curve shows the process temperature being lowered to -50 °C from 20 °C (70 K) which the 925w achieved in approximately 2-hours. The process temperature set-point is maintained with a DT of only (approximately) 2 K. The next curve demonstrates the heat-up capability of the Unistat 925w by returning the process temperature to 20 °C from -50 °C in approximately 40-minutes.
The following curves show the repeatability and predictability of the performance of the Unistat 925w by ramping the process temperature between 20 °C and -30 °C, each curve being exactly the same.

Unistat® 930w



CS 85

Controlling simulated exothermic reactions of 1 kW (860 kcal / hr) and 2 kW (1720 kcal / hr) in a Diehm 100-litre reactor

Requirement

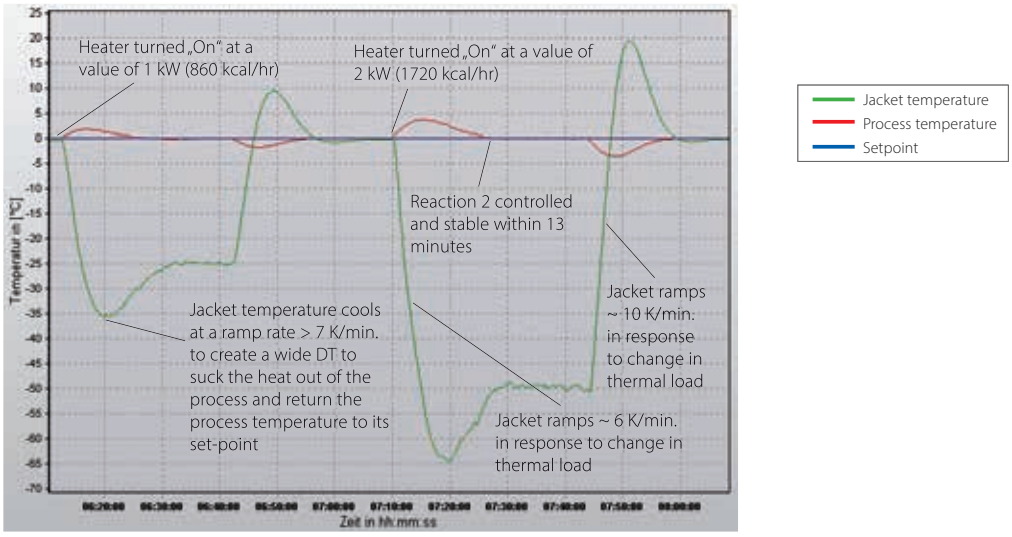
This case study is to see the performance of a Unistat 930w as it works to control simulated exothermic reactions in a 100-litre reactor.

Method

The Unistat and reactor are connected using two 1,5-metre insulated metal hoses. The reactor is filled with 75 litre of "M90.055.03", a Huber supplied silicon based heat transfer fluid.

Setup details

Temperature range:	-90...200 °C
Cooling power:	20 kW @ 0…-40 °C 15 kW @ -60 °C
Heating power:	24 kW
Hoses:	2x1,5 m; M38x1,5 (#6656)
Heat transfer fluid:	DW-Therm (#6479)
Reactor:	100-litre un-insulated glass reactor VPC Bypass installed
Reactor content:	75 litre M90.055.03 (#6259)
Stirrer speed:	400 rpm
Control:	process



Results

The response of the Unistat 930w can be seen in the graphic below. The jacket temperature is rapidly changed to control the "reaction" and maintain process temperature at its set-point.

CS 1022

Unistat® 1005w

Controlling an Asahi 10-litre triple wall reactor

Requirement

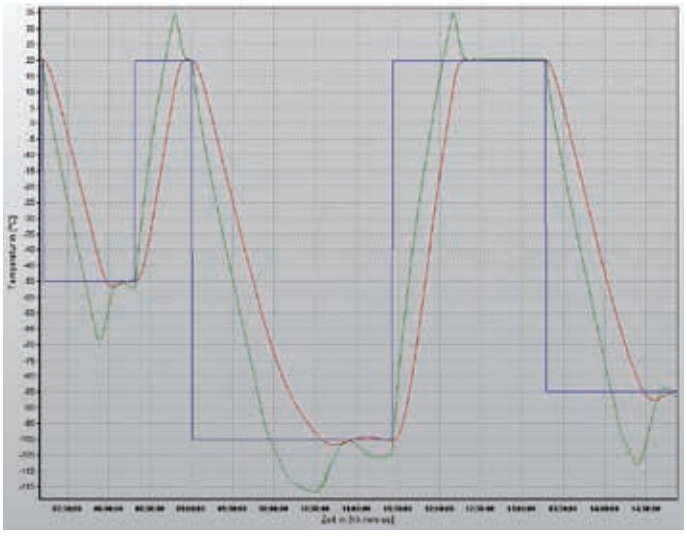
This case study demonstrates the ability of the Unistat 1005w to cool the contents of an Asahi vacuum insulated 10-litre reactor to -100 °C.

Method

The Asahi reactor was connected to the Unistat 1005w using two M30 x 1,5 2-meter insulated metal flexible hoses. The heat transfer fluid used was "Kryothermal S", a dedicated low temperature heat transfer fluid with a minimum operating temperature of -120 °C.

Setup details

Temperature range:	-120...100 °C
Cooling power:	1,5 kW @ 100…-40 °C 1,4 kW @ -60… -80 °C 1,0 kW @ -100°C
Heating power:	2,0 kW
Hoses:	2 x2 m; M30x1,5 (#6386)
Heat transfer fluid:	Kryothermal S
Reactor:	10-litre insulated jacketed glass pressure reactor
Reactor content:	10 litre M90.055.03
Stirrer speed:	~ 200 rpm
Control:	process



Results

Once stable at 20 °C under "Process" control, a set-point of -50 °C is entered. The jacket rapidly cools to approximately -68 °C to pull the process to -50 °C in approximately 1-hour.

The second curve shows the process stable at 20 °C before a new set-point of -100 °C is entered. Again the jacket rapidly cools to -116 °C pulling the process to -100 °C in just over 1,5 hours.

Ministat® 230-cc®-NR

CS 1216

Ministat® 230-cc®-NR controlling a vacuum insulated Syrris 2-litre glass jacketed reactor between 20 °C and -20 °C

Requirement

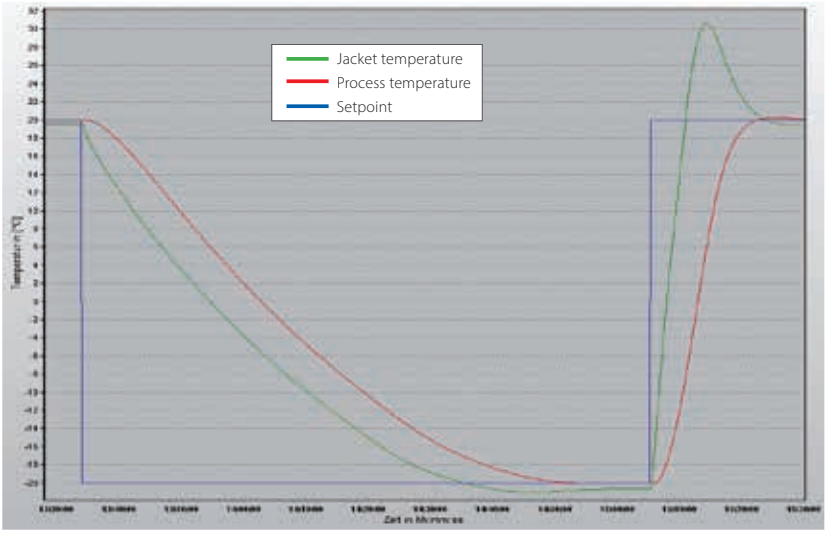
This case study demonstrates the lowest achievable temperature, speed of cooling and heating and level of control when connected with a Syrris "Atlas" system configured with a 2-litre reactor.

Method

The reactor was filled to 1.6 litre with M90.055.03, the heat transfer fluid used was Ethanol, the stirrer set to 700 rpm and the control to "process". The results were recorded using the "Spyware" software.

Setup details

Temperature range:	-40 °C...+200 °C
Cooling power:	0,38 kW @ 0 °C
	0,25 kW @ -20 °C
	0,14 kW @ -30 °C
Pump speed:	4500 rpm
Heating power:	2 kW
Hoses:	2x1 m; M16x1 (#9608)
Heat transfer fluid:	Ethanol
Reactor:	2-litre jacketed glass reactor
Reactor content:	1,4 litre M90.055.03 (#6259)
Stirrer speed:	700 rpm
Control:	process



Results

It can be seen from the graphic that the Ministat 230-cc-NR cools the process to -20 °C within approximately 1 hour and 20 minutes. The graphic shows the precise control and stability.

The heat up curve shows the precise control made possible by the Ministat 230-cc-NR as the process temperature reached exactly 20 °C from -20 °C in approximately 15 minutes.

CC®-K6

CC®-K6 controlling a 1-litre Labtex reactor

CS 1245

Requirement

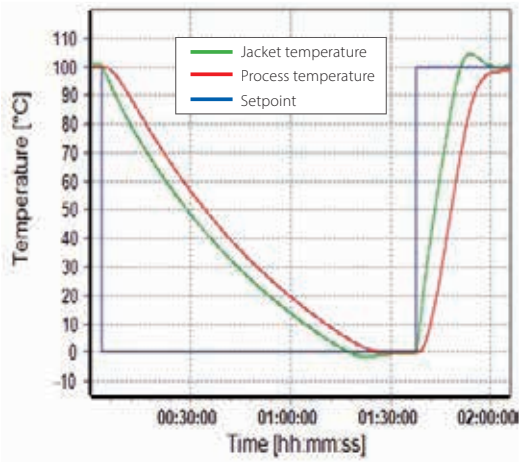
This case study looks at the efficiency and performance of a CC-K6 connected to a 1-litre Labtex reactor.

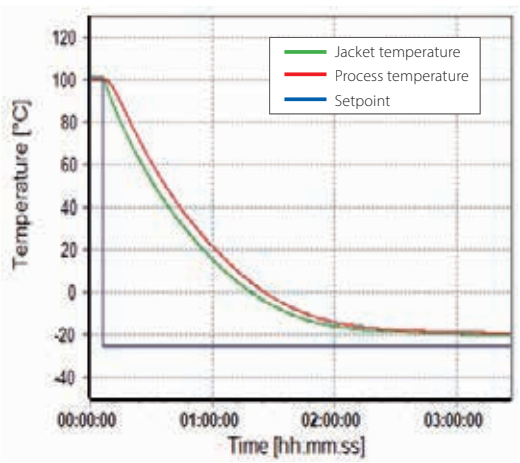
Method

The 1-litre Labtex uninsulated glass jacketed reactor, was connected to the CC-K6 using two insulated metal hoses. The heat transfer fluid used in the system was M80.100/250.03. "Process" control was carried out via a Pt100 sensor located in the process mass. Stirrer speed was set to 300 rpm.

Setup details

Temperature range:	-25°C...+200°C
Cooling power:	0,20 kW @ +20°C
	0,15 kW @ 0°C
	0,05 kW @ -20°C
Heating power:	2,0 kW
Hoses:	M16x1; 2 x 1 m
Heat transfer fluid:	M80.100/250.03
Reactor:	1-litre Labtex glass jacketed reactor, uninsulated
Reactor content:	M80.100/250.03 (0,7l)
Stirrer speed:	300 rpm
Control:	process





Results Performance

The first graphic shows the cooling and heating of the process from +100°C to 0°C achived in 83 minutes (ramp rate = 1,2 K/min) and back to +100°C acheived in 40 minutes (ram p rate = 2,5 K/min).

Lowest achievable temperature (T_{min})

The second graphic shows the minimum achievable process temperature of -18°C. It can also be seen that the Process cool down time to -15°C from +100°C was 120 minutes (ramp rate = 1 K/min) and to -18°C took 150 minutes.

FL = Suitable for inflammable and non-inflammable liquids VAR = Variable speed [1] Voltage can be changed, must be specified with order

Glossary

Technical terms and explanations

A

Ambient Temperature Range

is the permissible temperature range of the environment in which the unit will function. The general standard for Huber units is 5...40 °C (exceptions possible, see datasheet). The quoted cooling powers are for an ambient temperature of +20 °C.

Automatic Compressor Control

is a procedure used in refrigeration machines to save energy. A microprocessor control decides if the the refrigeration machine is required or if it can be switched off.

B

Bath Opening

is the usable surface that is available for direct thermoregulation, as a rule over the entire usable depth.

Bath Circulator

is a circulator which is equipped with a pump and a bath that contains the object to be thermoregulated. The built-in circulating pump is used to mix the bath liquid, but can also be used if necessary to circulate the heat transfer fluid through an externally connected circuit, e.g. connection of a flow-through cooler to allow the cooling of heating circulators.

Bath/Circulation Circulator

is a circulator with a bath opening which allows objects to be directly thermoregulated in the bath, but also includes a pump for external closed or open applications. Note: pressure & suction pump is required for open applications. Compatible Control circulators have pressure & suction pump.

Bath Volume (also fill volume)

is the volume of the bath liquid that is required for adequate operation of the circulator, but without considering the volume of heat transfer fluid in the external circuit. If two values are given, the lower value indicates the minimum required volume with displacement insert, the upper value the permissible maximum amount. The difference is the so-called expansion volume. Especially in the case of external applications, the size of the expansion tank must be considered, since the circulator must also take up the expansion of the liquid in the external circuit. The smaller the surface area of the expansion tank the lower is the area of heat transfer fluid open to attack from oxidation and air humidity absorption.

C

Calibration Bath (CAL)

is a bath circulator with especially high temperature stability and especially consistent temperature distribution through the bath.

Chiller (Unichiller)

is a special cooling circulator which is designed exclusively as a circulator. Circulation chillers have evolved from circulators and form a separate range of units in terms of their type of construction (DeskTop, Tower), the cooling and pump capacities. Generally they have no accessible bath. They are often used as a substitute for cooling with tap water. (exception: Minichiller).

Clear-view Bath

is a bath circulator with transparent walls for direct observation of the object being thermoregulated.

Cooling/Heating Circulator

is a circulator whose working temperature range is above and below the ambient temperature, and which can either add heat to or extract heat from the heat transfer fluid.

Cooling Capacity Control, automatic

is a control routine to save energy. The microprocessor based controller determines whether it is possible to reduce the cooling power. In addition to saving energy (up to 90 percent), this also saves wear and tear of the compressor, reduces the amount of heat discharged into the environment, and results in better temperature control.

Cooling Circulator

is a circulator whose working temperature range is below the ambient temperature and draws heat from the heat transfer fluid. Huber cooling circulators are strictly

speaking cooling/heating circulators, since their working temperature range is above and below the ambient temperature. Heat can be extracted from and added to the heat transfer fluid.

D

Discharge Pressure

is the positive pressure of the circulating pump of a circulator directly at the pump discharge. If only one value is given in the tables, then this involves the maximum delivery pressure for flow rate zero. Pump curves illustrate discharge in relation to the flow rate.

E

E-grade

stands for electronic upgrade. E-grade can extend the functionality of the Pilot ONE. A unit specific activation code is required. This can be carried out in the factory. If ordered at a later date the activation code can be sent by E-Mail.

Effective Usable Depth

is the fluid depth available in a bath thermostat for direct temperature control.

F

Flow Rate

is the volume of liquid delivered per time unit by the circulating pump measured with water. If only one value is given in the table, this is the maximum flow rate for a zero discharge pressure. Pump curves illustrate discharge in relation to the flow rate.

Flow-through Chiller (DC)

is an add-on cooler which is connected into an external circuit to upgrade a heating circulator to a heating/cooling circulator. Flow-through chillers are used to replace water cooling, and also to extend the lower operating temperature.

H

Heat Load

is the maximum capacity of the installed electric heater. The heating is controlled proportionally. The heating is continually controlled, and as the set point temperature is approached the power is reduced automatically.

Heating Circulator

is a circulator whose working temperature range is primarily above the ambient temperature adds heat to the heat transfer fluid.

Hydraulically Sealed Circulator (Unistats)

is a circulator in which heat transfer fluid is pumped through an open or closed external circuit. Hydraulically sealed circulators e.g. the Unistats can have a thermally discoupled expansion vessel, whose surface temperature is not the operating temperature. They do not have an accessible bath. Unistats have a thermally discoupled active surface (expansion vessel), where by the surface temperature is not necessarily the same as the operating temperature

I

Immersion Cooler (TC)

is an additional chiller with a flexible tube and a cooling coil (evaporator) for immersion cooling of any desired bath.

Immersion Circulator (CC-E, KISS E)

is a circulator that can be combined with a bath and to form a complete unit. Immersion circulators are equipped with a screw clamp to attach them to any desired bath wall or can be fixed on a stand. Immersion circulators can also be fitted to a bridge and mounted permanently in a bath.

Industrial Circulator (Unichiller-H)

is a cooling circulator (Unichiller range) with factory fitted heating. Industrial circulators have high cooling, heating and pump powers which allow quick cooling and heating rates due to the small internal volumes. They are ideal for temperature control in process technology, within a smaller temperature range (-20 °C to +120 °C).

Interface, analogue

is used to input the set value or to output the actual value of temperature in analogue form, generally in the form of a current (0/4–20 mA or 0–10 V).

Glossary

Technical terms and explanations

Interface, digital

is used to transfer data between connected units in digital form via data cable. The set and actual temperature values are the main items transferred. The serial RS232 interface allows a point-to-point connection. This means that at anyone time only two participants such as the circulator and the PC can communicate with each other via the interface. The RS485 interface is an addressable interface where up to 32 participants can be connected. Each participant of the bus system has its address.

Intrinsic Temperature

is the operating temperature of a heating circulator that is reached when the heating is switched off. It depends on the pump power, heat transfer fluid (viscosity and density) used and the insulation of the circulator, e.g. with or without a cover on the bath.

N Net Cooling Capacity

is the effective capacity available in cooling circulators or circulating chillers. This is the net cooling power of the unit after the frictional heat produced by the circulating pump and the heat entering as a result of non-ideal insulation has been subtracted.

O Operating Temperature Range

is the temperature range that is limited by the permissible lowest and highest operating temperatures.

P Pressure Pump

is used for circulation of the heat transfer fluid in an extemal closed circuit and in the bath.

Pressure/Suction Pump

has a pressure and a suction stage which are driven by the same motor. The heat transfer fluid is delivered from the pressure stage from the circulator into the circuit, and the suction stage draws the liquid back into the circulator. A pressure/suction pump can be used in just the same way as a pressure pump for a closed circuit. It has the advantage compared to a pressure pump that the pressure in the external circuit falls from positive values (pressure) in the flow line to negative values (suction) in the return line and is almost zero in the application itself. Thus it is suitable for the thermoregulation of pressure-sensitive glass vessels. Additionally it is possible to thermoregulate an open external circuit (e.g. a bath) with the aid of a pressure/suction pump. This cannot be done with a pure pressure pump, since this delivers heat transfer fluid to the bath. The heat transfer fluid can only be returned to the bath via a suction stage. In any case a so-called constant level device is required to maintain a constant level in the bath and this ensures that the flows of both pump stages are controlled so that they are equal. This is the only way that the level in the external bath can be maintained constant.

Process Control

Often cascade control, is when the temperature control is dictated by the temperature of the connected external application. A temperature sensor (often a Pt100 4 wire configuration with a Lemosa plug) is therefore required in the external application, which is connected to the circulator. The actual value measured at the external application is measured and a set point for the circulator is continually calculated. Depending on the operating temperature, insulation losses and exothermic reactions, the bath temperature and thus the flow temperature of the circulator can be considerably above or below the set point. (Always consider the safety limits of the fluid!!).

R Refrigerant

is used in the refrigeration unit within the circulator and extracts the heat from the heat transfer fluid, when the compressed gas expands in the evaporator. Huber has been completely CFC free since 1992 and HCFC (e.g. R22) free since 1994. Huber uses only refrigerants which do no damage to the ozone layer (ODP Ozone Depletion Potential, ODP=0), and minimal Global warming potential (GWP, i.e. Green house effect).

S Safety Classes

It is possible to use non-flammable or flammable bath liquids with circulators. The relevant safety requirements are given in DIN EN 61010-2-010. There is a distinction

made between the NFL classes with built-in over-heating protection that are exclusively for non-flammable liquids and FL (Flammable) with adjustable overtemperature protection and low level protection for flammable liquids (all Huber circulators).

Standards

The safety requirements for electrical laboratory equipment, and especially also those for circulators, have been defined in European standards EN 61010-1 and EN 61010-2-01 0, replacement for DIN 12879, among others. The terms and characteristic of characteristic data is defined in DIN 12876-1 and DIN 12876-2.

Suction Pressure

is the negative pressure of the circulating pump of a circulator directly at the pump suction. If only one value is given in the tables, then this is the maximum suction pressure for zero flow rate. Pump curves illustrate suction pressure in relation to the flow rate.

T

Temperature Homogeneity

is the temperature difference between the highest and the lowest measured temperature in a bath tank. In comparison with temperature stability it is determined not only over a defined time period, but also the spatial distribution of temperature within the bath. The temperature uniformity depends on various factors and is influenced for example by the nature and the viscosity of the heat transfer fluid, the level of circulation or by objects in the bath.

Temperature Stability

is the temperature difference between the highest and the lowest measured temperature divided by two. This value is determined at one point (e.g. the geometric centre of a bath tank or pump output) within a defined period of time (e.g. 30 min.). According to DIN 12876 the measurement must be made at +70 °C (with water) for a heating circulator and at -10 °C (ethanol) for a cooling circulator.

True Adaptive Control (TAC)

is a Huber designed dynamic adaptive controller that continually updates its PID parameters. The TAC controller constructs a virtual multidimensional model of the application in real time to cope with sudden changes in thermal load such as during an exothermic reaction.

V

Variable Pressure Control (VPC)

VPC is an active pressure control capability that allows the operator to control to either a maximum set pressure or pump speed. Through this feature it is possible to maintain the highest HTF flow rates within application pressure limitations (e.g. glass reactors).

W

Working Temperature Range

is the temperature range which can be attained at an ambient temperature of +20 °C by the circulator alone and with the exclusive use of electrical energy. The operating temperature, that may only be reached by using auxiliary devices, is indicated in brackets. In the case of a heating circulator the working temperature begins above room temperature (as a result of the energy introduced by the pump and the effective insulation) and ends at the upper limit of the operating temperature. The WTR of a cooling circulator begins with the lowest operating temperature of the unit and finishes with the upper temperature at which the refrigeration machine can permanently operate.

Working Temperature Range, extended

is the extended low end temperature range which can be attained when using a manufacturer designed cooling coil with water cooling.

General business terms

Hotline

Do you have a thermoregulation problem or questions relating to our products? You can contact us Monday to Friday from 7:30 to 18:00 (CET).

Terms and Conditions (Extract)

Validity, defence clause

All deliveries and services of the Peter Huber Kältemaschinenbau SE (supplier) are exclusively according to these general business terms and conditions (conditions) and any possible special contractual agreements. Other (purchasing etc.) conditions of the buyer are not a part of the contract, even if not specifically rejected in the order confirmation.

Prices

Unless otherwise agreed, the price is ex works, not including packing, transport, insurance, customs costs and other various incidental expenses accruing. In addition to the price, the sales tax must be added at the appropriate legally valid rate.

Payment Terms

If pre-payment has not been agreed, invoices are all payable within 30 days net, no discount.

Retention of ownership

The goods remain the property of the supplier (title is retained) until the fulfilment of all outstanding financial claims against the buyer.
The buyer may offer the (title retained) goods within the framework of normal business, however now all resulting demands for securing payment to the supplier up to the indebted sum (inclusive sales tax) passes to the new purchaser. The supplier acknowledges this.

Delivery times and delivery delays

The delivery time is calculated under the agreement of the contractual parties. Compliance on the part of the supplier is under the condition that all business and technical questions between the contracted parties are explained, and that the buyer has fulfilled all his obligations within the allotted time. If this is not the case, then the delivery time is extended appropriately. The delivery time is when items for delivery, have left the suppliers works or are ready for pick-up. An article can be offered for selling on by the buyer is allowed.

Transport and liability transfer

The order for the transport of the goods must be placed by the buyer.
The risk is passed to the buyer as soon as the items to be delivered have left the factory. This is also valid for part deliveries or when the supplier is contracted to perform other work (e.g. delivery, assembly and installation).
If the delivery is delayed, or omitted due to circumstances outwith the control of the supplier or because the buyer has so requested, then the risk passes to the buyer from the day the buyer is notified that the goods are ready for collection. This is also true for any delay in acceptance of the goods by the buyer due to other reasons.

Trials

If goods are supplied for testing, then it is classed as being bought by the buyer, if it is not returned within the agreed return time frame. If no return time has been agreed, this is to be taken as 4 weeks. The date of the invoice is decisive. In case of return, the buyer bears the cost of transport, checking and any other costs incurred by the supplier (Cleaning, servicing, repairs etc).

Warranty claims

The supplier is liable for Material and defective title of the delivery, under exception from further liability as follows:
The place of repair is exclusively decided by the supplier. Normally, the repairs take place at the registered office of the supplier, or at another place deemed suitable by the supplier.
The buyer has the right under the legal regulations to with draw from the contract, when the supplier, under consideration of the legal exceptions, has given a reasonable date for repair or replacement due to a manufacturing defect, which has now elapsed without success. If it is only a minor complaint, then the buyer has the right of a reduction in the contract price.
Further demands (damages etc) from the buyer are excluded. The seller is not liable for any problems resulting from an alteration to the unit made by the purchaser or any third party. The seller is also not responsible for any alterations to equipment which have not been authorised in writing in advance. Repairs which have not been authorised in writing by the supplier, outsourced work and modifications of any kind, non intended use, the changing or removal or manipulation of the machine label or the serial

number. All rule out supplier responsibility for defects.
The supplier is not under any circumstances liable for damages to the buyer or end customer caused by the non availability of parts or through production stoppage (e.g. due to late parts deliveries).

Cancellation
In case of order cancellation, cancellation fees will be charged.

Returns according to the (German) electrical and electronic equipment regulation (ElektroG)
The sale price excludes the cost for return and disposal of old equipment. The buyer is considered to be different than private households in the sense of this regulation. If required, the supplier can organise the return and recycling or disposal of such equipment as is distributed by the supplier, on payment of all charges so arising.

Returns policy pursuant to the German Packaging Act (VerpackG)
The sales prices do not include the cost of returns and disposing of transport packaging from users other than private households within the meaning of the German Packing Act (VerpackG). The customer is responsible for disposing of all packaging waste in the appropriate manner either by reusing the packaging or by taking it to a waste disposal facility or waste management company.

Severability Clause
If a clause in these conditions is invalid, it does not change the validity of the other clauses. If a clause is partially invalid, then the other parts of the clause remain valid. The parties are bound to replace the invalid clause with a valid replacement clause, which comes as close as possible to the economic use of the invalid clause.

Note
Please note that the terms and conditions described here are only valid for direct business with Peter Huber Kältemaschinenbau SE. Please consult your distributor for their terms of business.

Technical details and dimensions are subject to change.
No liability is accepted for errors or omissions.
